Pipe, Fittings & Valves for Cooling,
Chilled Water, Water Treatment, Marine
and Drinking Water

Technical Information

For technical data including operating & control pressures, dimensions as well as the use of accessories, please refer to data sheets which are available in both printed and electronic (pdf) formats from the Coventry Sales Office (details on back cover).

For details of our range of plastic pipe, fittings, manual and actuated operated valves in PVC-U, PVC-C, PP, PVDF, and PE as well as our INSTAFLEX PB, AQUASYSTEM PP-R and SIGNET measurement and control range, please contact the Coventry Sales Office.

Important Note

The technical data given in this catalogue is for preliminary information purposes only and is published without guarantee. All pictures and drawings are for illustrative purposes only and should not be regarded as wholly accurate in every detail. We reserve the right to withdraw or to alter the specification of any product without notice. Please consult our Terms and Conditions www.gfps.com/uk

The best choice for you

Corrosion and chemical resistant system solutions

+ Georg Fischer

Georg Fischer focuses on three core businesses: GF Piping Systems, GF Automotive and GF Machining Solutions. The industrial corporation founded in 1802 headquarters in Switzerland and operates approximately 130 companies with more than 14 000 employees across 30 countries.

GF Piping Systems is a leading supplier of plastic and metal piping systems with global market presence. For the treatment and distribution of water and chemicals, as well as the safe transport of liquids and gases in industry, we have the corresponding jointing technologies, fittings, valves, automation products and pipes in our portfolio.

GF Piping Systems headquarters in Schaffhausen, Switzerland.

+ Our market segments

Being a strong partner, GF Piping Systems supports its customers in every phase of the project. No matter which processes and applications are planned in the following market segments:

- Building Technology
- Chemical Process Industry

- Energy
- Food & Beverage / Cooling
- Microelectronics
- Marine
- Water & Gas Utilities
- Water Treatment

+ Global presence

Our global presence ensures customer proximity worldwide. Sales companies in over 26 countries and representatives in another 80 countries provide customer service around the clock. With 48 production sites in Europe, Asia and the USA we are close to our customers and comply with local standards. A modern logistics concept with local distribution centres ensures highest product availability and short delivery times. GF Piping Systems specialists are always close by.

+ Complete solutions provider

Our extensive product range represents a unique form of product and competence bundling. With over 60 000 products, allied with a broad range of services, we offer individual and comprehensive system solutions for a variety of industrial applications. Our automation offering perfectly fits into our complete system approach and is thus an integral part of our portfolio. Having the profitability of the project in focus, we optimise processes and applications that are integrated into the whole system.

Continually setting standards in the market, we directly provide our customers with technological advantages. Due to our worldwide network customers benefit directly from over 50 years of experience in plastics.

From start to finish, we support our customers as a competent, reliable and experienced partner, actively contributing the know-how of an industrial company that has been successful in the market for over 200 years.

Value added services

From planning support to implementation – our specialists are always close by

As a leading provider of piping systems in plastic and metal, we offer our customers not only reliable products, but also a large package of services. Our support ranges from a comprehensive technical manual or the extensive CAD library to an international team of experts, who work closely together with local sales companies. And when it comes to implementing a project, our customers additionally benefit from a wide range of training courses, either on site or in our modern training centres worldwide.

Generating a genuinely individual added value for our customers is our ultimate goal when implementing our tailor-made solutions. With our application knowledge and product expertise, we support our customers during the planning process, the sustainable realisation of the projects and the provision of services. Our expertise in developing and producing piping systems, combined with our profound industry and market knowledge, based on longstanding experience, makes us a qualified and professional partner for our customers.

1 Chemical resistance

Our specialist teams have decades of experience in the area of chemical resistance. They can offer individual support and advice in selecting the right material for the corresponding system solution. On request, a team will examine and select the appropriate material for special applications.

2 CAD library

The extensive CAD library is the most frequently used planning tool at GF Piping Systems. The database comprises over 30,000 drawings and technical data regarding pipes, fittings, measurement and control technology as well as manual and actuated valves. The big advantage of the CAD library is that the data can be integrated directly in CAD models.

3 Technical support

Technical support and material selection are key factors for a successful installation. A team of specialists headquartered in Switzerland is available to support the GF Piping Systems sales companies around the world. For technical advice or for general information, our customers are supported individually by the specialist team in the corresponding sales company.

4 Online and mobile calculation tools

Our numerous, multilingual online calculation tools are very useful for configuring and calculating. By means of pressure/temperature diagrams, the pressure of liquid media recommended for pipes and fittings at various temperatures can be easily defined. FlowCalc App, the mobile application of GF Piping Systems, is an on-site planning tool for pipe diameter and flow velocity calculation to select the right dimension of piping systems when no expert is near by.

5 On-site training

Our experts are available to support our customers locally and conduct training in diverse fusion and jointing techniques on location. The duration and structure of the training depends on the project and the system being installed.

6 Customising

The customising teams at GF Piping Systems work closely together around the globe. The focus of these teams is to manufacture custom parts for special systems. In addition, a variety of special solutions can be produced in small series. Standardized processes warrant the highest level of quality for the individual solutions of our customers.

7

Planning Fundamentals

For our customers, we have documented the extensive know-how of GF Piping Systems in planning and installing plastic piping systems in our technical manual. This detailed documentation is available in both printed and digital version. The established reference book is helpful in planning large and small projects.

8

Training courses

GF Piping Systems offers a wide range of training courses that allow participants to gain confidence in working with our products and proven jointing technologies. The practical training is clearly defined, structured and adapted to the various levels of participants' experience.

+ Worldwide Approval

GF ABS is manufactured and tested to the highest quality. Our own compound and strict quality controls for each material delivery form the basis for our high quality products,

Our own independently accredited test laboratory for components of plastic piping systems according to EN ISO 45001 assures the highest quality.

Quality and environmental management systems according to ISO 9001, OHSAS 18001, and 14001 are the basis for the continuous improvement of our performance. Third party approvals for GF ABS offer peace of mind to customers using the products.

GF ABS is approved under regulation 31 of the Water Supply (Water Quality) Regulations 2000 for use in public water supplies and listed in the 'List of Approved Products and Processes' published by the DWI.

+ Distribution, Warehousing and Technical Support

The excellent location of the UK Distribution Centre in Coventry offers the latest in state of the art distribution and warehousing systems. An enhanced delivery system and a comprehensive warehousing programme guarantees prompt delivery to GF customers nationwide.

Our Technical support staff are qualified to offer you advice and guide you through the wealth of products GF can supply. We make sure you feel confident that the product matches your requirements and leaving you fully assured that GF is your preferred supplier.

GF Fleet of delivery vehicles

Tracking delivery of your order

ABS Piping System

The specific properties of ABS allow its application in a wide temperature range from -50 °C to +60 °C. The exceptionally high notched impact strength values, even at low temperatures indicate the material's high robustness and tolerance to surface damage. The ABS piping systems is an energy-efficient solution for industrial applications in the low temperature range such as refrigerating and cooling systems.

Pipes

Fittings

Jointing technology

Valves

Measurement & Control

Essential system properties

- Outstanding abrasion resistance
- Low thermal conductivity
- High impact strength even at low temperatures
- Halogen free
- Safe and simple jointing technology with low costs for tools and materials

Fields of application

- Water treatment
- Marine
- Cooling

¹ Typical characteristics measured at the material should not be used for calculations.

General

Acrylonitrile-butadiene-styrene (ABS) is a versatile polymer. In addition to its application in piping systems, ABS is mainly common in automotive applications and in high-quality household devices. The wide area of application relates to the versatile characteristic profile of ABS which can be adapted to the respective application by taking advantage of the variable composition of the components acrylonitrile, styrene and polybutadiene.

ABS belongs to the amorphous thermoplastics. While acrylonitrile provides strength to the material and contributes to an improved chemical resistance relative to polystyrene, the styrenic component provides both strength and a quality surface finish. On the other hand, the chemically bound polybutadiene rubber components give the material its impact strength, even at very low temperatures. The ABS used by GF Piping Systems shows a good balance between toughness and strength, making it especially suitable for low temperature applications. Accordingly, the areas of application are mainly refrigeration and airconditioning systems as well as water treatment.

Advantages of ABS

- High impact strength even at low temperatures
- Corrosion resistance
- Simple installation via solvent cement joints
- Low thermal conductivity
- Halogen free
- Non-toxic
- Biologically inert; no support of microbial growth
- Low weight
- Low pressure losses due to smooth surfaces
- Good abrasion resistance
- Trouble-free recycling

UV and weather resistance

If the ABS piping system is exposed to direct sunlight over a long period, its surface loses its shine and the colour shifts to light grey. Due to the very high impact strength of ABS, the resulting loss of toughness generally causes no problems in moderate climate zones. For extreme weather conditions or very high loads on the piping system, we nevertheless recommend protecting the surface from direct sunlight.

Abrasion resistance

In addition to the excellent impact strength, the butadiene rubber components in ABS effect an outstanding resistance to abrasive stress. Because of this property, piping systems made of ABS have been used for solids and media containing solids, such as those found in mining, for a long time. ABS offers significant advantages for many of such applications compared to metals.

Application limits

The application limits of the material on the one hand depend on embrittlement and softening temperatures and on the other hand on the nature and the expected service life of the application. The pressure-temperature diagrams give details on application temperatures and pressures.

Combustion behaviour

ABS self-ignites at temperatures exceeding 450 °C. ABS burns when exposed to an open flame, after removing the flame, the material continues burning. The oxygen index amounts to 19 %. With an oxygen index below 21 %, ABS is considered to be flammable.

According to UL-94, ABS has an HB (horizontal burning) flammability coefficient and falls into building material class B2 (conventional inflammable, non-dripping) according to DIN 4102-1.

As a rule, toxic substances are released though all burning processes. Carbon monoxide is generally the combustion product most dangerous to humans. When ABS burns, primarily carbon dioxide, carbon monoxide and water are formed. Tests have shown that the relative toxicity of the products of combustion are similar or even lower than those of natural products such as wood, wool and cotton. ABS combustion gases are not corrosive. Nevertheless, the burning forms soot. Because of this, smoke develops during combustion.

Water, foam and carbon dioxide are suitable fire-fighting agents.

Electrical properties

Like most thermoplastics, ABS is not conductive. This means that no electrochemical corrosion takes place in ABS systems. However, the non-conductive properties have to be taken into account because an electrostatic charge can develop in the piping. ABS provides good electrical insulation properties. The specific volume resistance is $3.5 \times 10^{16} \Omega \text{cm}$, the specific surface resistance is $10^{13} \Omega$. These figures have to be taken into account wherever there is a danger of fires or explosion.

Physiological properties

Formulations of ABS used by GF Piping Systems are in general non toxic and biologically inert. For details regarding existing approvals for applications with drinking water or foodstuffs, please contact your GF Piping Systems representative.

+ Design of metric industrial piping systems

Range of applications for pipes and fittings

Pressure-temperature diagram for ABS

The following two pressure-temperature diagrams for ABS pipes and fittings are valid for a service life of 25 years. The design factor of 2.1 for BS inch systems and 1.8 for metric systems recommended by GF Piping Systems has been incorporated.

The diagram can be used for water or media resembling water, in other words, media that have no reduction factor for their chemical resistance.

Please take into account the pressure-temperature diagrams for valves and special fittings. Because of the construction and/or sealing material used, differences are possible when compared to pipes and fittings. More information is available in the Planning Fundamentals of the relevant types of valves and special fittings.

The influence of the anti-freeze compound has to be taken into account when calculating the allowable operating pressure. For example when using ethylene glycol $\leq 50\%$ aqueous a de-rating factor of 1.7 must be applied. Contact your authorised GF Piping Systems representative for additional information.

According to the 10°C curve in the Long-term behaviour for ABS, the following information applies to the temperature range from -50 °C to +60 °C

System	PN6	PN10	PN16
Permissible pressure	7.5 bar	11.8 bar	Max. 16 bar

Inch systems

P Permissible pressure (bar, psi)
T Temperature (°C, °F)

Metric systems

+ Jointing Technology

Solvent cement jointing using Tangit

Overview -Material/cement

Requirements and information

Solvent cement jointing calls for adequate technical know-how, which can be acquired in the appropriate training courses. Your authorised GF Piping Systems representative will be happy to provide information about training options.

For the correct selection of the cement, observe the information on chemical resistance for the use of Tangit cement. For more information, see www.gfps.com/tools.

Always obey the safety regulations issued by the responsible authorities, as well as information in the safety data sheet. The current safety data sheet is available at www.gfps.com/uk download centre.

Protective measures before cementing

Adequate ventilation of the workplace

Tangit cement and Tangit cleaner contain highly volatile solvents. This makes good ventilation or adequate fume extraction essential in closed spaces. Since the solvent fumes are heavier than air, extraction must occur at floor level, or at least below the working level. Place paper that has been used for cleaning or for the removal of surplus cement into closed containers to avoid of solvent fumes in the air.

No open flames when cementing. No smoking.

Cement and cleaner are flammable. Extinguish open flames before starting work. Switch off electric devices without explosion protection, electric heaters, etc. Avoid electrostatic charges. Discontinue any fusing operations. Furthermore, observe all instructions issued by the solvent cement manufacturer (e.g. label on the can and supplementary documentation).

Protection against spilled liquids

Pipes and fittings must be kept away from spilled cement, cleaner and used paper. Cement and cleaner that are no longer needed must be disposed of in an environmentally sound manner.

Use of gloves and protective glasses

The use of protective gloves is recommended to avoid cement or cleaner contact with the skin. If the cement or the cleaner come in contact with your eyes, rinse immediately with water. Consult a doctor! Immediately change clothes that have cement on them.

Required tools and equipment

No.	Description	Dimensions	GF Code
1	Pipe cutter	d10–d63 mm d50–d110 mm d110–d160 mm	790109001 790109002 790109003

11	Folding ruler	Commercially available	
12	Solvent-resistant safety gloves	Commercially available	
13	Protective glasses	Commercially available	

Dimensions and tolerances

The dimensions of pipes, fittings and valves made of ABS by GF Piping Systems generally conform to the standards EN ISO 15493 and EN ISO 1452-3. They can be connected with any fittings and valves made of the same material that have also been produced based on these standards.

Required amounts of Tangit cement

Diameter (d)	Tangit(kg/100 connections)	Amount(g/joint)
20	0.25	2.5
32	0.40	4.0
40	0.55	5.5
50	0.70	7.0
63	1.10	11.0
75	1.50	15.0
90	2.50	25.0
110	4.10	41.0
140	6.00	60.0
160	8.00	80.0
200	13.00	130.0
225	20.00	200.0
315	40.00	400.0

The amount of cement used depends on a variety of factors. The table provides average values. It is generally not necessary to exceed these values.

Cementing

Cementing should be performed at an ambient temperature of 5 °C to 35 °C.

1. Cutting the pipe to length

Cut off the pipe at a right angle by using a pipe cutter

2. Chamfering the pipe

Chamfer the end of the pipe with the chamfer device according to the following figure and table to enable a perfect cementing joint.

d (mm)	b (mm)
6 - 16	1 - 2
10 - 55	2 - 3
63 - 225	3 - 6
250 - 400	6 - 8

Well-chamfered pipe ends prevent the layer of cement from being removed as the pipe is inserted into the fitting.

3. Deburring the pipe

Debur the inside of the pipe with a deburring device.

4 Cleaning the pipe and fitting

First, remove any coarse dirt from the cementing surfaces (outside of pipe, inside of fittings). Clean the cementing surfaces thoroughly with Tangit PVC-U/PVC-C/ABS cleaner and paper. Always use a fresh piece of paper for each component. Remove any condensation that may have formed on the parts.

Pipes may have a waxy surface. To ensure proper jointing in such a case, the cleaning process must be repeated until the pipe surface becomes visibly matt.

Mechanical machining of the pipe surface may be necessary in individual cases. An indication of expected inadequate jointing quality is an absent or insufficient adhesion of the jointing parts following fine cleaning ("finger-nail check"). The jointing surfaces should then be roughened evenly with emery cloth of grain 80 or finer, observing the maximum permitted gaps.

The cementing surfaces must be dry and free from grease and dirt, and must not be touched after cleaning.

5 Marking the insertion depth

Mark the cementing length of the fitting on the pipe end using the folding rule and marking pen; this allows for checking the required application of adhesive and whether the pipe has been completely inserted.

Calculating the insertion depth:

$$t = \frac{d}{2} + 6$$

t Insertion depth (mm)

d Pipe diameter (mm)

If the outside diameter of the pipe and the inside diameter of the socket are at opposite extremes of their tolerances, then the pipe cannot be inserted dry into the fitting socket. Insertion will only become possible once the cement has been applied.

6 Checking the cement

Tangit cement is supplied ready for use. Stir thoroughly with a screwdriver or wooden spatula prior to use! Cement of the correct consistency will run evenly from a wooden spatula held at a slant. Cement that no longer runs smoothly is unusable. The cement must not be thinned since thinning would falsify the mixing ratio.

7. Applying the cement

Using firm brush pressure, apply an even, closed cement layer brushing in axial direction, first in the fitting, then on the pipe. Use a thin layer of cement in the fitting. To avoid subsequent bead formation inside the pipe, apply a generous amount on the pipe end.

Starting at d75, two people are needed to apply the cement to the pipe end and fitting socket simultaneously in order to avoid exceeding the maximum opening time of the cement.

Starting at d250, the cement is poured directly from the can into the middle of the cementing surface and distributed first radially and then axially over the entire area with a flat brush until an even, closed layer is present. The minimum layer thickness in the fitting area is 1 mm, while a heavier coat is applied at the pipe end. Cementing in these dimension ranges must be performed by at least 2 persons.

8 Connecting pipe and fitting

Immediately push pipe and fitting together to the stop or the full length of the socket (check insertion depth on the pipe) without twisting or misalignment and hold in position for a few seconds until the cement has set.

Starting at d250, push pipe and fitting together and align them by using 3 to 4 persons. Hold the joint in this position for 1 minute must be performed by at least 2 persons.

9 Checking and removing surplus cement

After jointing, a complete bead must be visible on the inside (smaller) and outside (larger).

Immediately wipe off any surplus cement using clean, absorbent paper.

Jointing faces must be kept clean.

Important note: Cement and cleaner should be stored in a cool, dry place (5 to 35 °C)! Under these conditions, the cement and cleaner can be used for 24 months starting from the date of filling (imprinted on the can).

Cans not in use should be closed immediately to prevent solvent losses and thickening. The brush lid can be used, which allows for leaving the brush in the can of cement.

Since both cement and cleaner dissolve the material, pipes and fittings must not be laid on or allowed to come into contact with spilled cement or paper containing cement residues.

Thickened cement sticking to the brush using dry paper and then rinse the brush with cleaner. Cleaned brushes must be dry before reuse.

Flushing before putting into operation

After the drying process (see table in the section "Waiting time and pressure test") the pipelines can be filled. To remove remaining solvent vapour, the pipeline must be thoroughly flushed before putting it into operation. For pipes that are not put into operation immediately, we recommend filling them with water and flushing them regularly after careful cleaning. Do not use compressed air for flushing

Tangit ABS

Charge/Batch-No.: _____

Abfülldatum/Filling date: _____

Diese Chargenkennzeichnung ist auf dem Prüf-/Abnahmeprotokoll anzubringen. / Put this product identification on the final test report.

Documenting Tangit batch for ABS cementing

To ensure the traceability of the Tangit batch(es) used, if needed, document the batch identification attached to every shipped unit to the test/acceptance report. If several batches are used in one project, add one identification from each batch to the test report.

Waiting time and pressure test

The length of the drying period before the joint may be subjected to testing or operating pressure depends on the drying temperature, the dimension and the fit requirements, as well as ambient influences.

The following table shows the corresponding waiting times and pressure test.

Materials and dimension	Temperature: 10 °C - 30 °C			Temperature: <10 °C / >30 °C		
	Between cementing	Operating pressure repair	Pressure test water max. 1.5 x PN	Between cementing	Operating pressure repair	Pressure test water max. 1.5 x PN
ABS						
< d160	10 min	1 h/bar	24 h	15 min	2 h/bar	48 h
d160-225	30 min	2 h/bar	24 h	60 min	4 h/bar	48 h
d250-315	60 min	4 h/bar	48 h	120 min	8 h/bar	72 h

Actual values at the construction site may deviate. These are empirical values.

Internal pressure test or leak tightness test of ABS with gas/air

Due to the risk of a pressure test with a compressible test medium, this pressure test should be carried out only in exceptional cases. The following diagram shows the required waiting times depending on the test pressure for ambient temperatures between 10 and 30 °C:

P Test pressure (bar, psi)
T Waiting time after last cementing (h)
Ambient temperature from 10 to 30 °C

Disposal

Dried product residues can be added to household or industrial waste. Large quantities must be disposed of separately. Empty packaging can be added to recycling.

+ Installation of metric industrial piping systems

Change in length and flexible sections Introduction

General

Thermoplastics are subject to greater thermal expansion and contraction than metals. Pipes installed above ground, against walls or in ducts, especially those exposed to temperature variations, require changes in length to be taken up in order to prevent extra strain on the pipes. Length changes can be taken up by:

- flexible sections
- compensators

Flexible sections are the most common solution, being the simplest and the most economical. The calculations for and the positioning of flexible sections are therefore described in detail.

Fundamentals

The low modulus of elasticity of thermoplastics allows changes in length to be taken up by special pipe sections, where pipe supports are positioned so that they can take advantage of the natural flexibility of the material. The length of such sections is determined by the diameter of the pipeline and the extent of the thermal expansion to be compensated. Flexible sections arise naturally at any branching or change in direction of the pipeline. The movement LB of the flexible section as a result of a change ΔL in the length must not be restrained by fixed pipe brackets, protrusions wall, girders or the like.

Calculation of change in length

The **change in length caused by temperature** can be calculated using the following formula:

$$\Delta L = L \Delta T \alpha$$

with:

- ΔL = temperature-related change in length (mm)
- L = length of the pipe section (m)
- ΔT = difference of temperature (K)
- α = coefficient of linear expansion (mm / m K)

Coefficients of linear expansion of polymers:

Material	α in mm/m K
ABS	0.10

* Exact values can be calculated using GF's online tool or ask your local representative

Tip: If the operating temperature is higher than the installation temperature, then the pipe expands. If, on the other hand, the operating temperature is lower than the installation temperature then the pipe contracts in length.

The installation temperature must therefore be incorporated into the calculations as well as the maximum and minimum operating temperatures. It is preferable to use "+" to indicate expansion of the pipe and "-" to indicate contraction.

The larger change in length is the one to be used for determining the required length of the flexible section.

The length of the flexible section for each change in length, ΔL , can be determined from the following formula:

$$a = c \cdot \sqrt{(d \cdot \Delta L)}$$

a = flexible leg (mm)
 c = constant
 d = pipe outside diameter (mm)
 ΔL = expansion or contraction (mm)

Material	c
ABS	32.7

Boundary conditions for using the diagram

For easy determination of the required length of flexible section please use the following diagrams. Please take into account the given boundary conditions.

- Assembly temperature $T_M = 20\text{ °C}$
- T_B Operating temperature
- $\Delta T = T_B - T_M$
- allowable bending stress 15 % of σ_v
- PN 6 .. 16
- Coefficient of friction of the pipe in the loose brackets ≤ 0.5

Information:

The following diagrams show the required flexible sections for straight pipe lengths of 10 m or 70 m. Exceeding the maximally permissible straight pipe distance would lead to buckling of the pipe due to the too large friction in the pipe clamps. Therefore the maximally possible pipe length is to consider depending on the pipe diameter => above the hatched range.

Example: Determining the required flexible section

Calculating the relevant change in length

The example of an ABS process pipe serves to illustrate the procedure:

Length of piping from the fixed point to the branch point where the change in length is to be taken up:

- $L = 8\text{ m}$.
- Installation temperature: $T_M = 20\text{ °C}$
- Max. working temperature: $T_1 = 35\text{ °C}$
- Min. working temperature: $T_2 = -20\text{ °C}$

Expansion of the section during heating
 $+\Delta L_1 = L \cdot \Delta T_1 \cdot \alpha = 8 \cdot 15 \cdot 0.10 = 12\text{ mm}$

Contraction during cooling
 $-\Delta L_2 = L \cdot \Delta T_2 \cdot \alpha = 8 \cdot 40 \cdot 0.10 = 32\text{ mm}$

Temperature differences

$$\Delta T_1 = T_1 - T_M = 15\text{ °C}$$

$$\Delta T_2 = T_2 - T_M = -40\text{ °C}$$

Maximum change in temperature chosen
 $\Delta T = 40\text{ °C}$

Determining the length of the flexible section for ABS

The values needed to determine the necessary length are:

- The maximum change in temperature from the 0-position (i. e. from the position in which the pipe was installed). But remember that the pipe could just as well contract as expand.
- The pipe diameter d .
- The length of the pipe section L .

With these values the required length of the flexible section can be read off from the diagram for ABS.

Continuing with the example introduced before and supposing that an ABS pipe with $d = 50\text{ mm}$ is installed, the maximum change in temperature being $\Delta T = 40\text{ °C}$, the required length of the flexible section is seen directly from the diagram to be $L_B = 1300\text{ mm}$.

L Length of the pipe section in mm
 L_B Required length of flexible section in mm

P0630827

L Length of the pipe section in mm

L_f Required length of flexible section in mm

Remark: Please observe the explanations to the hatched area in the clause boundary conditions

+ Installation of metric industrial piping systems

Recommendations for installation

Length changes in pipe sections should always be accommodated through the arrangement of fixed brackets. The following examples show how the changes can be distributed in pipe sections by suitable positioning of fixed brackets.

not recommended

recommended

Expansion loops can be installed to take up changes in length when flexible sections cannot be included at a change in direction or branch in the pipeline or if substantial changes in the length of a straight section need to be taken up. In such a case the compensation for changes in length is distributed over two flexible sections.

NOTICE

Bending load at flexible sections

Caused by the bending load leakages can occur at mechanical joints.

- Within the range of flexible sections and/or expansion loops no screw connections or flange connections shall be used.

Pre-stress

Length changes in pipe sections should always be accommodated through the arrangement of fixed brackets.

The following examples show how the changes can be distributed in pipe sections by suitable positioning of fixed brackets.

Installation data: $L = 10\text{m}$
 $d = 50\text{mm}$
 Installation temperature: 15°C
 Max. operating temperature: 40°C
 Material: ABS

a) Change in length

$$+\Delta L = L \cdot \Delta T \cdot \alpha_{\text{ABS}} = 10 \cdot 25 \cdot 0.10 = 25 \text{ mm}$$

b) A flexible section to take up a change in length of $\Delta L = 25\text{mm}$ needs to be $L_B = \text{approx. } 1150\text{mm}$ long according to the diagram.

c) If the flexible section is pre-stressed to $\Delta L/2$ then the required length of the flexible section is reduced to about 800mm. The variation length from the 0 position is then $\pm \Delta L/2 = 25/2 = 12.5\text{mm}$.

Pre-stressing the flexible section makes it possible to reduced its required length in installations where space is restricted. Pre-stressing also reduced the bending of the flexible section in service, improving the apperance of the pipeline.

Installing compensators

The low modulus of elasticity means that the reaction force of plastic pipes to thermal changes is low compared to metal pipes. This makes normal compensators designed for use with metal pipes unsuitable because of their high inherent resistance. Only freely moving compensators may be used in plastic pipe systems, i. e. those with a low resistance. The following compensators may be considered: rubber compensators, PTFE corrugated compensators or suitably selected metal multi-disc compensators.

Carefully placed fixed points should be used when fitting compensators for the regulation of the pipe in order to ensure their unhindered operation. The installation temperature provides the basis for the calculations to ensure this.

Tip: When using compensators, additional longitudinal forces are implemented into the pipeline. These forces have to be carried by guiding the pipeline. For example, threaded rods are not suitable. To estimate the lateral forces it can be assumed that they can reach about 15% of the axial forces. Please contact the manufacturers of compensators for further support designing such pipelines

Installing Valves

Valves should be secured as directly as possible, so that the actuation forces are transmitted directly and not via the pipeline. Valve brackets or valves from GF with an integrated fastening device are used to securely fasten plastic valves. These valve brackets are also used to bear the loads of the valve and filling weight of the pipeline. Any changes in length which arise can be prevented with the appropriate fixed points before or after the valve. You will find more information under the respective valve types.

Installing pipework under plaster or embedding it in concrete

Installing Valves

Installing pipework under plaster or embedding it in concrete

Padded pipework

Where pipework is installed under plaster or embedded into concrete, the flexible sections at bends and branches must be padded for the calculated distance H , as also must any branches and elbows included in the affected section. Use only flexible materials as padding, such as glass wool, mineral wool, foam or similar.

Unpadded pipework

Unpadded pipes can also be plastered or concreted in directly. Since the axial stress arising from internal pressure is half as great as the circumferential stress, pipelines can support limited additional axial stress without becoming overloaded. In such cases the level of stress expected must be calculated. The same is true of any section of pipe between two fixed points where no allowance has been made for changes in length. The load at the fixed points must be calculated and considered when planning the fixed points. The distance between pipe brackets in such cases may have to be reduced from the normal values in order to prevent bowing in the pipeline.

Care must be taken to avoid creating cavities when plastering or concreting in the pipeline, because under unfavourable conditions these can become areas of stress concentration.

A rich plaster mixture (1 : 3 to 1 : 4) should be used to allow the forces arising from temperature variations to be transmitted away without causing the plaster to crack.

+ Installation of metric industrial piping systems

Pipe bracket spacing and support of pipelines

General

Pipe support for plastics pipes

Plastic pipe systems should be installed using supports designed for use with plastics and should then be installed taking care not to damage or over stress the pipe.

Arranging Loose Brackets

What is a loose pipe bracket?

A loose pipe bracket is a bracket which allows axial movement of the pipe, to allow stress free compensation of temperature changes and compensation of any other operating condition changes

The inner diameter of the bracket should be larger than the outside diameter of the pipe to allow free movement of the pipe. The inner edges of the brackets should be free from any sharp contours which could damage the plastic. If the brackets' inside diameter is not larger than the pipe then the bracket should not be fully tightened, thus allowing the pipe to move.

Another method is to use brackets with spacers which also avoids clamping the bracket on the pipe.

Spacer to avoid clamping

Axial movement of the pipeline must not be prevented by fittings placed next to pipe brackets or by any other component affecting the diameter of the pipe. Sliding brackets and hanging brackets permit the pipe to move in different directions. Attaching a sliding block to the base of the pipe bracket permits free movement of the pipe along a flat supporting surface. Sliding and hanging brackets are needed in situations where the pipeline changes direction and free movement of the pipe must be allowed.

Arranging fixed points

What is a fixed point?

A fixed pipe bracket is a bracket which prevents the pipe from moving in any direction. The aim of which is to control system stresses caused by temperature changes.

NOTICE

Construction of fixpoint

This should not be done by simply clamping the bracket onto the outside of the pipe! This can cause deformation and physical damage to the pipe, damage that sometimes only later becomes visible.

- It should be done either by using pipe brackets located between two fittings or a double bracket must be used. (double-sided fixed point).
- Placing a pipe bracket immediately adjacent to a fitting restricts movement due to changes in length to one direction (one-sided fixed point).

Information:

Pipe brackets must be robust and mounted firmly to be able to take up the forces arising from changes in length in the pipeline. Hanging brackets or KLIP-IT pipe brackets are unsuitable for use as fixed points.

KLIP-IT pipe brackets

These robust plastic pipe brackets can be used not only under rigorous operating conditions, but also where the pipework is subject to aggressive media or atmospheric conditions. They may be used for all materials of pipes. Don't use KLIP-IT pipe brackets as fixed points!

Starting from the dimension d90 the KLIP-IT brackets must be installed standing, like shown in the assembly examples. The support distances given in the following, specified for the KLIP-IT tubing clamps, apply only to this mounting method.

Pipe brackets for cold insulation (MIP)

Open handle

Insert pipe
Close handle with quick-action clamp

Assemble insulation
1. Take off foil
2. Press area of contact

Move insulation into the bracket. Attention!
Make sure the insulator is positioned correctly.

Tighten the screw

Coat areas of contact with adhesive and bond them

Using the tables for pipe bracket spacing

Plastic pipelines need to be supported at certain intervals depending on several factors: the material, the average pipe wall temperature, the density of the medium transported and the size and wall thickness of the pipe. Determining the spacing between pipe brackets is based on the permissible deflection of the pipe between consecutive brackets.

Information:

The values given in the tables apply only to pipelines which are freely movable in the axial direction.

Pipelines which are fastened tightly in the axial direction (fixed installations) must be checked for buckling. In most cases, this leads to a reduction of the maximum inner pressure and shorter distances between the support brackets.

Furthermore, the forces that act on the fixed points must also be taken into consideration.

For assistance, please contact your nearest GF representative.

Pipe bracket spacing for ABS pipes

Liquids with a density of 1 g/cm³

d mm	DN inch	Pipe bracket intervals L for pipes PN10 / SDR17 / S8 or class C in mm at pipe wall temperature:

Full face flange ABS Inch BS Drilled to universal standard

Model:

- In accordance with BS 10, DIN EN 1092 and ASME B 16.5
- Jointing face serrated
- It is recommended to use backing flanges in conjunction with all Full Face Flanges
- All Full Face Flanges are manufactured with outside diameter to BS EN 1092
- Solvent cement socket BS inch
- For pressure ratings over 2 bar backing flanges must be used

GF Ball Valve Labelling

The Simple Way to Identify Your Ball Valves Individually

Identify the ball valves in your piping systems clearly and easily with the GF Ball Valve Labelling. Whether to comply with standards or for more clarity - you decide how to label your ball valves.

Benefits

- Increased safety for piping system and operator
- Improved efficiency of operation and maintenance
- Customised system identification

Specifications

- For GF Ball Valve Types 546, 523, 543 and 547
- Lever clip material: SAN
- Print sheet A4: Polymer foil

Product features

- UV, weather and chemical resistant
- Can be labelled with laser printers or by hand

Step One

Design your personalised label

Step Two

Print your label

Step Three

Fit your label

Printing Sheets for ball valve labelling

Inch (inch)	d-d (mm)	DN-DN (mm)	Code	Quantity
3/8 - 1/2	16 - 20	10 - 15	198 807 231	25 sheets with each 48 labels
3/4 - 1	25 - 32	20 - 25	198 807 232	25 sheets with each 24 labels
1 1/4 - 1 1/2	40 - 50	32 - 40	198 807 233	25 sheets with each 18 labels
2	63	50	198 807 234	25 sheets with each 11 labels

Transparent lever clip for ball valve labelling

Inch (inch)	d-d (mm)	DN-DN (mm)	Code	Quantity
3/8 - 1/2	16 - 20	10 - 15	198 807 221	10 pc's
3/4 - 1	25 - 32	20 - 25	198 807 222	10 pc's
1 1/4 - 1 1/2	40 - 50	32 - 40	198 807 223	5 pc's
2	63	50	198 807 224	5 pc's

Ball Valves

Ball Valves Type 546

Ball valve type 546 ABS With mounting inserts With solvent cement sockets BS Inch

Model:

- For easy installation and removal
- Ball seals PTFE
- Integrated stainless steel mounting inserts
- z-dimension, valve end and union nut are **not compatible** with type 346 (DN10/15-50) resp. type 370 (DN65-100)

Option:

- Individual configuration of the valve (see diagram)
- Multifunctional module with integrated limit switches
- Pneumatic or electric actuators from GF

Size (inch)	DN (mm)	PN (bar)	kv-value ($\Delta p=1$ bar) (l/min)	EPDM Code	Weight (kg)

DN10/15 - 50

Ball valve type 546 ABS

With mounting inserts

With butt fusion spigots long PE100 SDR11 metric

Model:

- Material: ABS/PE
- For easy installation and removal
- Ball seals PTFE
- Integrated stainless steel mounting inserts
- z-dimension, valve end and union nut are **not compatible** with type 346 (DN10/15-50) resp. type 370 (DN65-100)

Option:

- Individual configuration of the valve (see diagram)
- Multifunctional module with integrated limit switches
- Pneumatic or electric actuators from GF

3-Way Ball Valves Type 543

3-Way ball valve type 543 ABS Horizontal/L-port With solvent cement sockets BS

Model:

- For easy installation and removal (valve end and union nut are compatible with type 546)
- Ball seals PTFE
- Pneumatic or electric actuator available separately
- Angle of operation 360° without turn limiter
- Turn limiter 90° enclosed, in different positions usable as a clip-on ring
- Integrated stainless steel mounting inserts
- Delivery status A-C opened, see flow scheme

3-Way ball valve type 543 ABS
Vertical/L-port
With solvent cement sockets BS

Model:

- Vertical inlet solvent cement spigot metric
- Easy installation and removal using union on third outlet
- Ball seals PTFE
- Electric actuator available separately
- Angle of operation 360° without turn limiter
- Delivery status B-C opened, see flow scheme

Mode of action:

- For interconnection of two inputs

3-Way ball valve type 543 ABS
Vertical/L-port
With solvent cement sockets metric

Model:

- Vertical inlet solvent cement spigot metric
- Easy installation and removal using union on third outlet
- Ball seals PTFE
- Electric actuator available separately
- Angle of operation 360° without turn limiter
- Delivery status B-C opened, see flow scheme

Mode of action:

- For interconnection of two inputs

Multifunctional modules

DN10/15 - 50

Multifunctional module (I02) PP-GF Module empty

Model:

- Accessory to ball valve type 546
- Multifunctional module acts as an intermediate element for actuators
- For operation with handle, multifunctional handle has to be ordered separately.
- Including screws to mount the module and stainless steel coupling piece (V2A) for dimension DN65-100
- The multifunctional module from d75 - d110 has a master gauge F07 according to EN ISO 5211.

Diaphragm Valves

Diaphragm valve type 514 ABS With solvent cement sockets BS

Model:

- Double flow rate compared to predecessor
- One housing nut replaces four screws
- Handwheel with built-in locking mechanism
- For easy installation and removal
- Short overall length

Option:

- Individual configuration of the valve (see diagram)
- Self adjusting multifunctional module with integrated limit switches

DN 15-65

DN 80-100

Diaphragm valve type 317 ABS With flanges metric

Model:

- Flat sealing faces
- DN 80-150 with fixed flange
- Overall length according to EN 558
- Other dimensions available on request
- Minimum temperature: - 30°C

Option:

- Handwheel lockable DN15-65 (basic version not lockable)

* DN80 and DN150 fixed flanges metric and Inch ANSI B16.5

Lugstyle butterfly valve type 578 ABS

Reduction gear with handwheel

Model:

- Housing material: PP-GF30 with SS316 lug-inserts
- Overall length according to EN 558, ISO 5752 (DN50 - 200 line 25, DN250 - 300 line 10)
- Connecting dimension: ISO 7005 PN10, EN 1092 PN10, DIN 2501 PN10

Option:

- Optional accessory: Valve-Integrated position feedback with limit switches (limit switches have to be ordered separately)

Metal Butterfly Valves Type 039 and 038

Metal - butterfly valve type 039M With hand lever

Model:

- Body GGG40 (A 395 M:88, EN-JS 1020 EN1563) Rilsan coating
- Seat Material: EPDM, FPM and others on request
- Full bore shaft, square shape
- Installation length: EN 558 row 20
- Mounting between ISO, ANSI, BS or JIS Flanges
- Interface according to DIN/ISO 5211
- Also available: gearbox with handwheel, electric-, pneumatic actuated

Metal - butterfly valve type 038M With hand lever

Model:

- Seat Material: EPDM, FPM and others on request
- Housing: ductile iron GGG-40/ASTM A536, Rilsan® coated
- Available in ANSI standard upon request
- In case this valve is used at the end of the line, the following pressures must not be exceeded:
DN50 to DN150 5,6bar and > DN200 3,5bar

Cone Check (non-return) Valves

Check valve type 561 ABS
With solvent cement sockets Inch BS

Model:

- Sealing at a minimum water column of 2m
- Designed for easy installation and removal
- Vibration free even at high flow velocity
- Flow-optimized return cone, double guided
- For vertical installation
- Compact installation length, same as ball valve type 546
- Z-length, end connectors and union nuts **not** compatible with type 360
- New DN65-DN100

Check valve type 562 ABS With threaded sockets Rp

Model:

- For horizontal or vertical installation
- Sealing at a minimum water column of 1m
- Spring loaded, spring made of stainless steel (1.4310)
- Spring available in other materials, see spare parts
- Designed for easy installation and removal
- Vibration free even at high flow velocity
- Flow-optimized return cone, double guided
- Compact installation length, same as ball valve type 546
- Z-length, end connectors and union nuts **not** compatible with type 360

Process Control Valves

Ventilating and Bleed Valve Type 591

Ventilating and bleed valve
Type 591 ABS
With solvent cement sockets Inch BS

Model:

- With protection cap up to DN50 made from PP-GF, DN65-100 made from POM
- Floater made of PP-H
- Designed for easy installation and removal
- Compact installation length

Ventilating Valve Type 595

Ventilating valve type 595 ABS With solvent cement sockets Inch BS

Model:

- With protection cap up to DN50 made from PP-GF, DN65-100 made from POM
- Spring loaded, spring made of NIMONIC 90, HALAR coated
- Spring available in other materials, see spare parts
- Designed for easy installation and removal
- Compact installation length

Strainers

Line strainer type 305 ABS With solvent cement spigots metric

Model:

- Protects valves, pumps, etc. from becoming soiled
- Easy dismantling for cleaning the screens
- Overall length EN 558
- Cylindrical screen must be ordered separately
- Screen in stainless steel operable temperature range up -40°C to +60°C
- Screen in PVC-U operable temperature range up 0°C to +60°C

Chamfering tool

- Chamfering tool with 15° bevel for plastic pipes (PVC, ABS, PP, PB, PE). Coated prism surface suitable for clean room applications. Fast and reliable adjustment to different pipe diameters and wall thickness. Coated prism surface suitable for clean room applications. Fast and reliable adjustment to the different pipe diameters and wall thickness.

Code	Weight (kg)	d-d (mm)

Backing flanges, PP-Steel

Backing flange PP-Steel metric For socket systems metric and BS

Model:

- PP-GF (30% glass-fibre reinforced) with steel ring
- UV-resistant. Applicable for outside applications
- Connecting dimension: ISO 7005, EN 1092, BS 4504, DIN 2501
- Connecting dimension: ANSI/ASME B 16.5 class 150, ASTM D 4024, BS 1560, BS EN 1759
- Material: PP (30% glass-fibre reinforced) with steel ring
- **Bolt circle PN 10**
- **Bolt circle class 150**
- For socket systems metric and BS
- For Flange Adaptors BS/ANSI + metric

AL: number of holes

¹⁾ Suitable for socket -and butt fusion systems

²⁾ Not for BS

³⁾ Connecting dimension: ISO 2536. bolt circle acc. DN125. suitable for flange adaptor d125/ DN100

⁴⁾ Connecting dimension: ISO 2536. bolt circle acc. DN225. suitable for flange adaptor d250/ DN250

⁵⁾ Combined version, bolt circle metric - ANSI

Suitable for socket and butt fusion systems, no pictograph on flange.

O-Ring gasket

Model:

- For unions and adaptor unions
- Hardness approx. 65° Shore
- EPDM minimum temperature -40°C
- FPM minimum temperature -15°C
- * for unions PVC-U, PVC-C and ABS: 21 51 01, 21 51 11, 21 53 03, 21 53 08, 21 55 04, 21 55 13, 21 55 18, 23 51 01 and 29 51 01 only

484407

Profile Flange Gasket, metric EPDM / FPM

Model:

- Centering on the inner diameter of the screw crown
- Hardness: 70° Shore EPDM, 75° Shore FPM
- EPDM: approved acc. to DVGW W 270, KTW recommendation
- Centering on the inner diameter of the screw crown
- Material steel insert: carbon steel
- Rubber-steel body combined with rubber profile cord ring

di FA are the suitable inner diameters of flanges adaptors

GEORGE FISCHER SALES LIMITED (“George Fischer”) CONDITIONS OF SALE (FOR GOODS AND SERVICES)

1 INTERPRETATION

- 1.1 In these conditions of sale the following words will (unless otherwise stated) have the following meanings: “**Conditions**” means the terms and conditions set out in this document. “**Contract**” means any contract between George Fischer and the Customer for the supply of any Works. “**Customer**” means the company, firm, body or person purchasing the Works. “**Custom Goods**” means each product supplied by George Fischer in accordance with the Customer Design Requirements. “**Customer Design Requirements**” means the drawings, designs, parameters or specifications for Goods which are provided by the Customer and to which George Fischer has agreed in writing. “**Customer’s Property**” means any dies, tools, patterns, packagings and any other equipment, goods, materials, or information supplied by or on behalf of the Customer to George Fischer in connection with the Works. “**Deliverables**” means the items produced by George Fischer and supplied to the Customer as part of the Services (other than Goods). “**Goods**” means any and all goods (including without limitation Custom Goods and Standard Goods) agreed in the Contract to be provided by George Fischer to the Customer (including but not limited to the whole or any part or parts of them, any raw materials, finished or semi-finished materials, machinery, parts, spares, commodities and any materials, articles and commodities supplied in connection with such Goods). “**IPR**” means patents, registered designs, unregistered designs, copyright and related rights, database rights, trademarks, trade names and domain names, rights in get-up, rights in goodwill or to sue for passing off or other industrial or intellectual property rights in each case whether registered or unregistered and including all applications (or rights to apply) for and renewals or extensions of, such rights and all similar or equivalent rights or forms of protection which may now or in the future subsist in any part of the world. “**Services**” means any services agreed in the Contract to be provided by George Fischer to the Customer (including but not limited to the whole or any part or parts of them). “**Standard Goods**” means any goods agreed in the Contract to be provided by George Fischer to the Customer other than the Custom Goods. “**Works**” means the Goods and/or the Services (as appropriate).
- 1.2 Any reference in these Conditions to any statute or statutory provision will (unless otherwise stated) be construed as a reference to that statute or statutory provision as may be amended, consolidated, modified, extended, re-enacted or replaced from time to time.
- 1.3 The headings in these Conditions are for reference only and will not affect the interpretation of these Conditions.
- 1.4 In these Conditions any use of the phrase “unless otherwise agreed in writing” or any similar phrase will mean unless otherwise agreed in writing and signed by a director or commercial manager of George Fischer.
- 1.5 George Fischer reserves the right at any time to correct any clerical, typographical or other similar errors made by its employees, and shall not be bound by any such errors.

2 QUOTATIONS

- 2.1 Any quotation (whether written or oral) is given on the basis that no contract will come into existence otherwise than in accordance with the provisions of clauses 3.5 and 3.6.
- 2.2 Unless otherwise agreed in writing any quotation is valid only for a period of 45 days from its date of issue provided that George Fischer has not previously withdrawn it by written or oral notice to the Customer.
- 2.3 Any quotation is based on the instructions and information provided by the Customer and George Fischer reserves the right to amend the quotation at any time to cover any increase in price which may arise as a result of additional, amended or incomplete instructions or information.

3 APPLICATION OF TERMS

- 3.1 Subject to clause 3.4 these Conditions are the only conditions on which George Fischer is prepared to deal with the Customer and they will apply to all Contracts to the exclusion of any other terms and conditions including but not limited to those which the Customer purports to apply.
- 3.2 No terms or conditions endorsed upon, delivered with, referred to or stipulated or contained in any purchase order, correspondence or any other document delivered or sent by the Customer to George Fischer will form part of the Contract.
- 3.3 Any reference in the Contract or in any dealings between the parties to the Customer’s purchase order or other similar document will not be deemed to imply that any terms or conditions endorsed upon, delivered with, referred to or stipulated or contained in such purchase order or other document will have any effect or operate to exclude or amend these Conditions.
- 3.4 Any variation to these Conditions and any representation about the Works will only be effective if it is agreed in writing, contains a specific reference to these Conditions and is signed by a director or commercial manager of both parties.
- 3.5 Each purchase order for Works issued by the Customer will be deemed to be an offer by the Customer to purchase Works subject to these Conditions.
- 3.6 No purchase order placed by the Customer will be deemed to be accepted by George Fischer until a written acknowledgement of order is issued by George Fischer or (if earlier) George Fischer commences the Works or supplies the Works to the Customer.
- 3.7 The Customer acknowledges and accepts that:
- it is fully responsible for the contents of its order and the Customer Design Requirements, and must ensure that they are complete and accurate; and
 - Standard Goods are commercial “off the shelf” products and are not made to satisfy any Customer requirements.
- 3.8 Unless otherwise agreed in writing all drawings, illustrations, descriptions, specifications, technical data, advertising and other similar information issued by George Fischer or contained in George Fischer’s catalogues, brochures, trade literature, price lists, websites or other similar published materials are issued or published only for the purpose of giving an approximate idea of the Works described in them and will not form part of the Contract.
- 3.9 Any purchase order which has been accepted by George Fischer in accordance with clause 3.6 may only be amended, cancelled, postponed or varied by the Customer with the prior written consent of George Fischer and on terms that the Customer will indemnify George Fischer in full against all losses (including but not limited to loss of profit), costs, damages, charges and expenses incurred (directly or indirectly) by George Fischer as a result of such amendment, cancellation, postponement or variation.

4 DELIVERY

- 4.1 Any times specified or agreed by George Fischer for the delivery of the Goods and/or performance of the Services are given in good faith but are an estimate only. If no time is specified or agreed by George Fischer delivery will take place within a reasonable time. Time will not be of the essence for the delivery of the Goods or for the performance of the Services.
- 4.2 George Fischer will use its reasonable endeavours to deliver the Goods and perform the Services within the times referred to in clause 4.1 but George Fischer will not be liable for the consequences of any delay, or failure to deliver or perform, if (a) the duration of the delay is not substantial, or (b) the delay or failure is due to any circumstances beyond George Fischer’s reasonable control or of an unexpected or exceptional nature or (c) the delay results from or is contributed to by any act or omission of the Customer.

- 4.3 Subject to the provisions of clause 4.4, delivery will be deemed to take place when the Works are delivered to the Customer at such place as the parties may agree from time to time, except that delivery to a carrier for the purpose of transmission to the Customer will be deemed to be delivery to the Customer and sections 32(2) and (3) of the Sale of Goods Act 1979 will not apply.
- 4.4 If George Fischer agrees to permit the Customer to collect the Works from George Fischer’s place of business then delivery will be deemed to take place when George Fischer notifies the Customer that the Works are ready for collection and unless otherwise agreed in writing the Customer will collect the Works within 3 working days of the issue of such notice.
- 4.5 George Fischer will use its reasonable endeavours to ensure where necessary that the Works will be packed so as to be adequately protected against damage in normal conditions of transit of usual duration. George Fischer will make such arrangements for the carriage and insurance of the Works as it agrees with the Customer.
- 4.6 George Fischer may deliver the Goods and perform the Services in instalments. Deliveries of further instalments may be withheld until the Works comprised in earlier instalments have been paid for in full. Default by George Fischer (howsoever caused) in respect of one or more instalments will not entitle the Customer to terminate any other instalment, the relevant Contract or any other contract between the parties.
- 4.7 In the event of any delay in the delivery of any Goods or the performance of any Services which are attributable (in whole or in part) to the Customer’s acts or omissions then:
- delivery of the relevant Goods or performance of the relevant Services (as the case may be) will be deemed to have taken place at the time at which but for such delay or delays such delivery or performance would have taken place and any extra costs incurred as a result of such delay or delays will be added to the Contract price and will be payable by the Customer; and
 - George Fischer may sell such Goods 28 days after such delay and deduct any monies payable to George Fischer by the Customer from the sale proceeds and account to the Customer for any excess or charge the Customer for any shortfall.
- 4.8 Where the Works are to be supplied from stock such supply is subject to the availability of the stock.
- 4.9 The Customer shall examine all Goods within 14 days following delivery. Subject to clause 9.2, George Fischer will not be liable for any shortages in or non-delivery of the Works (even if caused by George Fischer’s negligence) unless the same is notified in writing by the Customer to George Fischer (together with all relevant details) within 14 days of the actual or anticipated date of delivery (as appropriate). Subject to such notice being provided George Fischer will, if it is reasonably satisfied that any Works have not been delivered as a result of George Fischer’s fault (in its sole discretion) either arrange for delivery as soon as reasonably possible or give credit (at the pro rata Contract price) to the Customer for such Works. Any shortages in or non-delivery of part of the Works will not affect the Contract in respect of the other parts of the Works or any other contract.
- 4.10 If George Fischer complies with clause 4.9 it will (subject to clause 9.2) have no further liability (in contract, tort (including but not limited to negligence) or otherwise) for such shortages or non-delivery.
- 4.11 Whilst George Fischer will use reasonable endeavours to supply the exact quantity of the Works ordered by the Customer, George Fischer may supply and the Customer will accept up to 10% more or less than the exact quantity ordered. A pro rata increase or reduction in the Contract price (as the case may be) will be made to cover any such variation.
- 4.12 The Customer (at its own expense) will ensure that the place where delivery of the Goods or performance of the Services is to take place (excluding in each case any premises of George Fischer) is adequate and appropriate for such delivery or performance and will provide such access, equipment, facilities, protection, manual labour and information as may be required to enable George Fischer to perform its obligations under the Contract.

5 RISK AND OWNERSHIP

- 5.1 Unless otherwise agreed in writing the Works are at the risk of the Customer from the time of delivery or deemed delivery to the Customer (as appropriate) and loading and off loading (as appropriate) will be at the Customer’s risk. Section 20(2) of the Sale of Goods Act 1979 will not apply.
- 5.2 Notwithstanding that risk in the Works will pass to the Customer in accordance with the provisions of clause 5.1, ownership of the Works (both legal and equitable) will only pass to the Customer (other than when ownership is properly vested in some other person by the operation of any statute) when George Fischer has received in full (in cash or cleared funds) all monies due to it from the Customer:
- in respect of the Works; and
 - all other sums which are or which become due to George Fischer from the Customer on any account.
- 5.3 Until ownership of the Works has passed to the Customer under clause 5.2, the Customer will:
- hold the Works on a fiduciary basis as George Fischer’s bailee;
 - keep the Works free from any charge, lien or other encumbrance;
 - store the Works (at no cost to George Fischer) separately from all other materials of the Customer or any third party in such a way that they remain readily identifiable as George Fischer’s property;
 - not destroy, deface or obscure any identifying mark on the Works or their packaging;
 - maintain the Works in a satisfactory condition, insured on George Fischer’s behalf for their full price against all risks to the reasonable satisfaction of George Fischer and on request provide a copy of such policy of insurance and proof that the premiums have been paid to George Fischer;
 - hold all proceeds of the insurance referred to in clause 5.3(e) on trust for George Fischer and not mix it with any other money or pay the proceeds into any overdrawn bank account;
 - not attach the Works to any real property without George Fischer’s consent; and
 - notify George Fischer immediately if it becomes subject to any of the events listed in clause 16.2.
- 5.4 The Customer may resell, use or otherwise dispose of the Works before ownership has passed to it only if any such sale, use or disposition will be effected in the ordinary course of the Customer’s business and will be a sale, use or disposition of George Fischer’s property on the Customer’s own behalf and the Customer will deal as principal.
- 5.5 George Fischer may while the owner of the Works (and without prejudice to any other rights it may have under or by virtue of these Conditions) demand the immediate return of the Works at any time and the Customer will forthwith comply with such demand and bear the expenses for such return.
- 5.6 The Customer grants or, where applicable, shall procure that any relevant third party grants to George Fischer (or its successors in title for the Works) and their respective employees and agents an irrevocable licence to enter at any time any premises where the Works are or may be situated for the purpose of inspecting or removing any such

GEORGE FISCHER SALES LIMITED (“George Fischer”) CONDITIONS OF SALE (FOR GOODS AND SERVICES)

- Works the ownership in which has remained with George Fischer (or such successor in title).
- 5.7 George Fischer will be entitled to recover payment for the Works notwithstanding that ownership of any of the Works has not passed from George Fischer.
- 5.8 The Works will be deemed sold or used by the Customer, in the order in which they are delivered to the Customer by George Fischer.
- 6 CUSTOMER'S GENERAL OBLIGATIONS**
- 6.1 The Customer shall:
- (a) co-operate with George Fischer in all matters relating to the Contract;
 - (b) provide George Fischer with such information and materials as George Fischer may reasonably require to comply with its obligations under the Contract, and shall ensure that such information is accurate in all material respects;
 - (c) obtain and maintain all necessary licences, permissions and consents which may be required for Customer's purchase, transportation and use of the Goods and as may be required for George Fischer to provide the Services (except where and to the extent that the Parties agree in writing that this is George Fischer's responsibility); and
 - (d) keep and maintain all materials, equipment, documents and other property of George Fischer at the Customer's premises in safe custody and in good condition and not dispose of or use the same other than in accordance with George Fischer's written instructions or authorisation.
- 7 PRICE AND PAYMENT**
- 7.1 The price stated in the Contract is based on the cost to George Fischer of materials, fuel, power, transport, taxes, duties, services, labour and all other costs at the date of George Fischer's quotation, acknowledgement of order or supply (whichever is earlier). If at the date of delivery or deemed delivery or performance of the Works, there has been any increase in all or any of such costs, or there has been any agreed change to the Customer Design Requirements, the price payable for the relevant Works may be increased by George Fischer accordingly.
- 7.2 Quotations given in a currency other than sterling are based on the rate of exchange at the time of quoting and (unless otherwise agreed in writing between the parties) the price may be subject to revision if any different rate of exchange is ruling at the date of invoice.
- 7.3 Unless otherwise agreed the price for the Works is exclusive of any value added tax (and any other tax or duty relating to the manufacture, transportation, sale or delivery of the Works) and any costs or charges in relation to export and/or import, packaging, loading, unloading, carriage and insurance. Such costs and expenses will be paid by the Customer in addition to the price for the Works at the same time that it is due to pay for the Works.
- 7.4 Where George Fischer agrees (in its discretion) to bring forward the date of delivery or performance of any Works at the Customer's request any overtime or other additional costs reasonably incurred by George Fischer shall be charged to the Customer in addition to the Contract price.
- 7.5 George Fischer may invoice the Customer for the Goods at any time after the delivery of the Goods or the delivery of any instalment (as appropriate). In respect of the Services George Fischer shall be entitled to invoice the Customer at any time after performance of the relevant services. If any delivery or performance is postponed at the request or by the default of the Customer then George Fischer may submit its invoice at any time after the Goods are ready or would have been ready for delivery or the Services would have been performed (as appropriate) in the ordinary course but for the request or default on the part of the Customer.
- 7.6 Customers who have been granted by George Fischer (in its sole discretion) a credit account facility will pay the price within 30 days of the date of the relevant invoice. George Fischer may (in its sole discretion) amend the terms of or withdraw such credit account facility at any time without notice with immediate effect and on such withdrawal all amounts due or accruing to George Fischer under the Contract will become immediately payable despite any other provision of these Conditions.
- 7.7 Customers who have not been granted a credit account facility will pay the price 5 working days prior to delivery or performance (as the case may be) of the Works.
- 7.8 No payment will be deemed to have been received until George Fischer has received cleared funds.
- 7.9 Time for payment by the Customer will be of the essence of the Contract and the Customer will indemnify George Fischer against all expenses and legal costs incurred by George Fischer in recovering overdue amounts.
- 7.10 All payments payable to George Fischer under the Contract will become due immediately on termination of this Contract despite any other provision of these Conditions.
- 7.11 The Customer will make all payments due under the Contract without any deduction whether by way of set-off, counterclaim, discount, abatement or otherwise unless the Customer has a valid court order requiring an amount equal to such deduction to be paid by George Fischer to the Customer, or such deduction is otherwise required to be permitted by law.
- 7.12 If the Customer fails to pay George Fischer any sum due pursuant to the Contract the Customer will be liable to pay interest to George Fischer on such sum from the due date for payment at an annual rate of 4% above the base lending rate of HSBC Bank plc from time to time accruing on a daily basis until payment is made in full (whether before or after any judgement). In the alternative, George Fischer in its absolute discretion, reserves the right to claim interest and compensation payments under the Late Payment of Commercial Debts (Interest) Act 1998.
- 7.13 Without prejudice to the provisions of clause 7.12, if the Customer fails or George Fischer reasonably believes that the Customer will fail to pay for the Works when due George Fischer may demand payment of all outstanding balances whether due or not, treat the Contract as repudiated by the Customer or suspend any future performance of the Contract or any other contract with the Customer until all overdue sums have been paid.
- 7.14 If George Fischer provides for or arranges for any non-cash awards and/or incentives for the benefit of the Customer (including but not limited to shopping vouchers), the Customer agrees that it is solely responsible for the payment of any and all applicable taxes, duties or levies which may be or become payable in respect of such non-cash award and/or incentive (excluding Class 1A National Insurance, which shall be paid by George Fischer), and the Customer agrees that it will keep George Fischer fully indemnified in respect of any demand made for any such tax, duties or levies, and any fines, penalties or interest incurred by George Fischer from time to time in respect of such non-cash award and/or incentive.
- 8 QUALITY**
- 8.1 George Fischer warrants (subject to the provisions of this clause 8) that:
- (a) on delivery of the Goods and for a period of 12 months from the date of delivery (the "Warranty Period"), the Goods will comply with the relevant Standard Specification or Customer Design Requirements (as appropriate); and
 - (b) the Services will be performed and Deliverables prepared with reasonable skill and care by properly qualified and experienced persons.
- 8.2 George Fischer will not be liable for any defect in Works unless:
- (a) the Customer gives written notice of the defect to George Fischer within 28 days of the date when the Customer discovers or ought reasonably to have discovered the defect and in any event, on or before expiry of the Warranty Period;
 - (b) the defect is as a result of damage in transit, and the Customer gives written notice of the defect to the carrier in the manner and within the appropriate time limit as set out in the carrier's terms of business; and
 - (c) George Fischer is given a reasonable opportunity after receiving such notice to examine such Works and the Customer (if requested to do so by George Fischer) returns such Works to George Fischer's place of business (at the Customer's cost) for the examination to take place there.
- 8.3 George Fischer will not be liable for any defects in any Works, where and to the extent that:
- (a) the defect arises from the Customer's Property or as a result of the Customer's negligence;
 - (b) the defect arises as a result of fair wear and tear, misuse, wilful damage, or abnormal working conditions;
 - (c) the defect arises as a result of any parts, materials or equipment not manufactured or workmanship not performed by George Fischer;
 - (d) the defect arises as a result of George Fischer following the Customer Design Requirements;
 - (e) the defect arises out of any deviation from the Customer's Design Requirements to ensure that the relevant Custom Product complies with applicable legal or regulatory standards;
 - (f) the Customer makes any further use of such Works after giving written notice of the defect;
 - (g) the defect arises because the Customer has failed to follow George Fischer's instructions (whether oral or in writing) as to the storage, assembly, installation, commissioning, use, processing, handling or maintenance of the Works or (if there are none) good trade practice;
 - (h) the defect arises as a result of any installation, testing or commissioning of the Works performed by the Customer or any third party; or
 - (i) the defect arises as a result of any alteration, servicing or repair of the Works not made by George Fischer and without the written consent of George Fischer.
- 8.4 Subject to clauses 8.2 and 8.3 in the event that any of the Works do not conform with any of the warranties set out in clause 8.1 George Fischer will at its option and cost repair or replace the relevant Goods (or the defective part), re-perform the relevant Services (or the defective part) or refund the price of such Works or the defective part at the pro rata Contract rate.
- 8.5 If George Fischer complies with clause 8.4 it will (subject to clause 9.2) have no further liability (in contract, tort (including but not limited to negligence) or otherwise) in respect of the defect in the Works.
- 8.6 Any Goods replaced by George Fischer or which George Fischer has agreed to replace in accordance with the provisions of clause 8.4 will belong to George Fischer and any repaired or replacement Goods will be guaranteed on these terms for the unexpired portion of the original Warranty Period.
- 9 LIMITATION AND EXCLUSION OF LIABILITY**
- THE PRICES CHARGED FOR THE WORKS ARE BASED STRICTLY ON THE UNDERSTANDING OF ACCEPTANCE BY THE CUSTOMER OF THE PROVISIONS IN THE CONTRACT FOR THE LIMITATION OF GEORGE FISCHER'S LIABILITY. SHOULD THE CUSTOMER WISH GEORGE FISCHER TO ACCEPT ADDITIONAL LIABILITY THIS MAY BE DISCUSSED BETWEEN THE PARTIES AND THE PRICE MAY BE INCREASED ACCORDINGLY.
- 9.1 All warranties, conditions and other terms implied by statute, common law, trade, practice, custom or course of dealing (except for the conditions implied by section 12 of the Sale of Goods Act 1979 and section 2 of the Supply of Goods and Services Act 1982) are, to the fullest extent permitted by law, excluded from the Contract.
- 9.2 Nothing in these Conditions excludes or limits the liability of George Fischer for fraud, (including fraudulent misrepresentation) or for any death or personal injury caused by George Fischer's negligence or for any breach of the conditions implied by section 12 of the Sale of Goods Act 1979 and section 2 of the Supply of Goods and Services Act 1982 or any other matter in respect of which it would be unlawful to exclude or restrict liability. THE CUSTOMER'S ATTENTION IS IN PARTICULAR DRAWN TO THE PROVISIONS OF CLAUSES 9.3 and 9.4
- 9.3 Subject to clause 9.2, George Fischer will not be liable to the Customer in contract, tort (including but not limited to negligence), misrepresentation or otherwise:
- (a) for any economic loss of any kind (including but not limited to direct or indirect loss of profit, business, contracts, revenue or anticipated savings);
 - (b) for any direct or indirect damage to the Customer's reputation or goodwill;
 - (c) for any direct or indirect product recall costs; or
 - (d) for any special, indirect or consequential loss or damage (even if George Fischer has been advised of such loss or damage),
- in each case, arising out of or in connection with the Contract.
- 9.4 Subject to the provisions of clauses 9.2 and 10.2, George Fischer's total liability to the Customer in respect of all other liabilities arising under or in connection with the Contract, whether in contract, tort (including but not limited to negligence), breach of statutory duty, or otherwise (including but not limited to losses caused by a deliberate breach of the Contract by George Fischer, its employees, agents or subcontractors) shall not exceed the price of the Goods or Services which are the subject of the claim or, if the claim does not relate to any particular Goods or Services, the total price paid, payable or that would have become payable under the Contract.
- 10 THE CUSTOMER'S PROPERTY**
- 10.1 While George Fischer will take reasonable care of the Customer's Property whilst it is in George Fischer's possession, control or custody the Customer's Property will (unless otherwise agreed in writing) remain at the Customer's risk and all replacements and alterations of and repairs to the Customer's Property will be the Customer's responsibility.
- 10.2 George Fischer will not be liable for any loss or damage to the Customer's Property unless such loss or damage arises as a direct result of George Fischer's negligence or wilful misconduct. Where George Fischer is liable under this clause 10.2 George Fischer's liability to the Customer will be limited to £100,000.
- 10.3 The Customer will ensure that the Customer's Property is in good condition and suitable for use by George Fischer in the performance of the Contract and while George Fischer will use reasonable endeavours to verify any relevant aspects of the Customer's Property no responsibility is accepted by George Fischer for its accuracy.
- 10.4 Any defect in the Works or any part of them which is due in whole or in part to the Customer's Property will not entitle the Customer to terminate the Contract, reject the Works, make any deductions from the Contract price or claim damages in respect of such defect.
- 10.5 The Customer will keep George Fischer indemnified in full against any and all liabilities, demands, injuries, claims, actions, costs (including but not limited to legal costs), expenses, proceedings, judgments, awards, sanctions, fines, damages and losses

GEORGE FISCHER SALES LIMITED (“George Fischer”) CONDITIONS OF SALE (FOR GOODS AND SERVICES)

- suffered or incurred, and settlements made by George Fischer as a result of or in connection with the use by George Fischer of the Customer's Property unless and to the extent that such liability, loss, damage, injury, claim, action, demand, expense or proceeding is the result of George Fischer's negligent acts or omissions.
- 10.6 The Customer shall defend and indemnify George Fischer from and against any and all liabilities, demands, injuries, claims, actions, costs (including but not limited to legal costs), expenses, proceedings, judgments, awards, sanctions, fines, damages and losses suffered or incurred, and settlements made by George Fischer in connection with any claim made against George Fischer arising out of, related to or in connection with the Customer's Design Requirements or their use as anticipated under the Contract.
- 11 TOLERANCES AND TESTS**
- 11.1 Without prejudice to clause 4.11, unless otherwise agreed in writing gauges, weights, chemical composition and analysis, quantities and sizes will, so far as possible, be adhered to but reasonable excesses and deficiencies will be accepted by the Customer, who will not be entitled to reject any Works on the ground that they are not precisely as specified (in the event of any such reasonable excesses or deficiencies).
- 11.2 An additional charge will be made for all tests, test pieces and inspections required by the Customer and agreed by George Fischer, unless otherwise agreed in writing. All tests and inspections will take place under George Fischer's standard testing arrangements, and such tests will be final (except in the case of manifest error or fraud). All tests are subject to analytical tolerances.
- 11.3 The Customer may attend (at its own cost) all tests provided that it notifies George Fischer in writing of its intention to do so. The Customer will then be given not less than 5 working days' prior notice of the proposed date and time of any test and, if the Customer fails to attend, the test will proceed in its absence although it will be deemed to have been made in its presence.
- 12 OWNERSHIP OF TOOLING**
- 12.1 Where patterns, dies, tools, drawings and equipment are not supplied by the Customer, only those which are specially made by George Fischer and separately charged to the Customer in full, will, become the property of the Customer, and such property shall pass in accordance with clause 5.2 following payment in full for them by the Customer.
- 12.2 George Fischer reserves the right to destroy or otherwise dispose of patterns, dies, tools, drawings and equipment in its possession, control or custody (whether or not the property of the Customer) from which the Customer has not required any Goods to be made or Services provided for a period of 12 months or more.
- 13 PACKING CASES AND PACKING MATERIALS**
- 13.1 Unless otherwise agreed in writing, there will be no additional charges for packing cases and packing materials but, where stated to be returnable, will be returned to George Fischer in good condition, within one month of receipt by the Customer. Where not returnable, the Customer will dispose of all packing in accordance with all regulations (whether statutory or otherwise) relating to the protection of the environment.
- 14 CONFIDENTIALITY**
- 14.1 The Customer will keep confidential all technical data, commercial information, know how, specifications, inventions, processes, initiatives and other information which is of a confidential nature and which has been disclosed or made available to the Customer by George Fischer and/or any member of the George Fischer group and/or its agents, and any other confidential information concerning the business of George Fischer and/or any member of the George Fischer group or its or their products ("Confidential Information").
- 14.2 The Customer will restrict disclosure of the Confidential Information to such of its employees, agents, professional advisers or subcontractors as reasonably need to know the same and will ensure that such employees, agents, professional advisers or subcontractors are subject to equivalent obligations of confidentiality as bind the Customer.
- 14.3 The Customer will not without the prior written consent of George Fischer publish or disclose the Confidential Information to any third party or make any use of the Confidential Information except to the extent necessary to implement the Contract.
- 15 INTELLECTUAL PROPERTY**
- 15.1 The Customer will keep George Fischer indemnified in full against any and all liabilities, demands, injuries, claims, actions, costs (including but not limited to legal costs), expenses, proceedings, judgments, awards, sanctions, fines, damages and losses suffered or incurred, and settlements made in respect of any infringement or alleged infringement of any IPR resulting from any use by George Fischer of the Customer's Property, the Customer Design Requirements or any compliance by George Fischer with the Customer's instructions, whether express or implied.
- 15.2 Unless otherwise agreed in writing, ownership in all IPR subsisting in, resulting from or relating to the Works or any associated plans, descriptions, blue prints, designs, technical information, drawings, documents or specifications including without limitation the Custom Products (except where and to the extent these comprise the Customer's Property) will vest in George Fischer. If the Customer in any way acquires any such rights it will promptly inform George Fischer and take such steps as George Fischer may reasonably require to assign such rights or vest such title in George Fischer.
- 15.3 The Customer grants to George Fischer a non-exclusive, worldwide, perpetual, non-terminable, irrevocable, royalty-free licence to use reproduce, modify and develop all IPRs which subsist in the Customer's Design Requirements or any other confidential information of the Customer disclosed to George Fischer for the purposes of manufacturing and supplying the Goods, providing the Services and otherwise performing its obligations under the Contract.
- 15.4 Nothing in these Conditions will be construed as any representation or warranty by George Fischer that the design, manufacture, use or sale of the Works is not an infringement of any third party IPRs.
- 16 TERMINATION**
- 16.1 George Fischer may terminate the Contract (and all other contracts between George Fischer and the Customer) immediately on written notice to the Customer if:
- (a) the Customer fails to pay the price on the due date;
- (b) the Customer is in breach of any term of the Contract and such breach is incapable of remedy;
- (c) the Customer is in breach of any term of the Contract and has failed to remedy such breach within 28 days of receipt of written notice specifying the breach and requiring it to be remedied; or
- (d) there is a material change in the ownership or control of the Customer.
- 16.2 Without limiting its other rights or remedies, George Fischer may terminate the Contract or suspend performance of its obligations with immediate effect by giving written notice to the Customer if the Customer:
- (a) is unable or admits inability to pay or suspends payment of its debts as they fall due;
- (b) any legal proceedings or other procedure or step is taken in relation to the indebtedness of the Customer including, without limitation:
- (i) a composition, compromise, assignment or arrangement with any creditor (or any proposal for or negotiation of any of the same);
- (ii) the appointment of a liquidator, receiver, administrator, administrative receiver or other similar officer;
- (iii) an application, petition, notice, order or resolution for the winding-up, dissolution, administration, liquidation or reorganisation (by way of voluntary arrangement, scheme of arrangement or otherwise); or
- (iv) an enforcement of any security over any assets;
- (c) the Customer ceases or suspends or threatens to cease or suspend the conduct of all or substantially all of its business; or
- (d) suffers a deterioration in its financial position to such an extent that in George Fischer's opinion the Customer's capability to adequately fulfil its obligations under the Contract has been placed in jeopardy.
- 16.3 The termination of the Contract (howsoever arising) will be without prejudice to any rights and remedies which may have accrued to either party.
- 16.4 Any Conditions which expressly or impliedly have effect after termination or expiry will continue to be enforceable notwithstanding termination or expiry, including, without limitation, clauses 1, 3, 5, 6, 7, 8, 9, 10.2, 10.4, 10.5, 10.6, 12.2, 14, 15, 16.3, 16.4, 18, 19, 20 and 21.
- 17 EXPORT SALES**
- 17.1 Where the Works are supplied for export from the United Kingdom the provisions of this clause 17 will (subject to any special terms agreed in writing between the parties) apply despite any other provision of these Conditions.
- 17.2 The Uniform Laws on International Sales Act 1967 will not apply.
- 17.3 Unless otherwise agreed in writing the currency will be pounds sterling. The Customer will establish and maintain in favour of George Fischer an irrevocable and confirmed letter of credit in English with a UK clearing bank payable on drafts drawn at sight on presentation to the bank by George Fischer of a certified copy of George Fischer's invoice. All bank charges and other expenses in relation to the letter of credit will be borne by the Customer.
- 17.4 Unless otherwise agreed in writing Works will be sold C.I.F (as defined in INCOTERMS 2010 Edition).
- 17.5 The Customer will be responsible for complying with and shall comply with any legislation or regulation governing the export of the Works:
- (a) from the United Kingdom; and/or
- (b) where the Works are sourced from a country other than the United Kingdom, from such country and the importation of the Works into the country of destination and for payment of any relevant duties or taxes whether payable by the Customer or George Fischer.
- 17.6 Unless otherwise agreed in writing, there will be additional charges for packing cases and packing materials but, where stated to be returnable, will be credited in full on return to George Fischer's place of business (carriage paid) in good condition, within one month of receipt by the Customer. Where not returnable, the Customer will dispose of all packing in accordance with all regulations (whether statutory or otherwise) relating to the protection of the environment.
- 18 LIEN**
- George Fischer will have in respect of unpaid debts due to it from the Customer a general lien on all property of the Customer which is in George Fischer's possession for whatever reason and whether worked upon or not.
- 19 ASSIGNMENT AND SUBCONTRACTING**
- 19.1 The Customer will not without the prior written consent of George Fischer assign or transfer the Contract or any part of it to any other person.
- 19.2 George Fischer may without the prior written consent of the Customer assign, transfer or subcontract the Contract or any part of it to any other person.
- 20 COMPLIANCE**
- 20.1 The Customer shall, at all times, in its dealings with George Fischer and any third party with whom it deals in relation to this Contract, comply with:
- (a) all applicable laws, regulations and sanctions relating to anti-bribery and anti-corruption, including but not limited to the Bribery Act 2010; and
- (b) George Fischer's Bribery Policy; and
- (c) all applicable competition and export/trade laws. The Customer will not, through any act or omission, cause George Fischer to be in breach of any such laws or regulations.
- 20.2 A breach of this clause 20 shall be considered a material breach which shall give George Fischer an immediate right to terminate this Contract without prejudice to its other rights and remedies.
- 21 GENERAL**
- 21.1 Each right or remedy of George Fischer under these Conditions is without prejudice to any other right or remedy which George Fischer may have under these Conditions or otherwise.
- 21.2 Any notice or document shall be deemed served, if delivered by hand, at the time of delivery, if posted, 48 hours after posting and if sent by facsimile transmission, at the time of transmission. George Fischer may also send a notice or document by electronic communication in an e-mail address notified to George Fischer by the Customer. Such notice or document shall be deemed served if sent by e-mail at the time of sending, unless George Fischer receives a notification that such e-mail has not been delivered.
- 21.3 The illegality, invalidity or unenforceability of any provision of these Conditions will not affect the legality, validity or unenforceability of any other provisions of these Conditions.
- 21.4 Failure or delay by either party in exercising any right or remedy provided by the Contract or by law will not be construed as a waiver of such right or remedy or a waiver of any other right or remedy.
- 21.5 A person who is not a party to the Contract will have no right under the Contracts (Rights of Third Parties) Act 1999 to enforce any term of the Contract. This clause 21.5 does not affect any right or remedy of any person which exists or is available otherwise than pursuant to that Act.
- 21.6 The Customer agrees that it will have no remedy in respect of any untrue statement innocently or negligently made by or on behalf of George Fischer prior to the Contract upon which the Customer relied in entering into the Contract whether such statement was made orally or in writing unless the statement has been expressly agreed in writing by a director of George Fischer and/or the statement has been expressly incorporated in writing into the Contract.
- 21.7 George Fischer shall not be in breach of these Conditions or otherwise liable to the Customer by reason of any delay in performance or non-performance of any of its obligations due to any circumstances outside George Fischer's reasonable control.
- 21.8 The Contract and any dispute or claim arising out of or in connection with it or its subject matter or formation (whether or not such dispute or claim is contractual) shall be governed by, and construed in accordance with, English law.
- 21.9 The Parties irrevocably submit to the exclusive jurisdiction of the courts of England to settle any claim or dispute that arises out of or in connection with the Contract (whether or not such dispute is contractual).
