

Schlüter®-KERDI-SHOWER

System components for floor level showers

Schlüter®-KERDI-SHOWER

Schlüter®-KERDI-SHOWER is a modular system for the construction of floor level showers with ceramic and stone tiles. The sloped boards are available in different sizes and can be combined with waterproofing sets for wall and floor drains, with optional use of base levelling panels.

The base dimensions are

90 x 90 cm
100 x 100 cm
120 x 120 cm
150 x 150 cm
90 x 180 cm

The floor elements can easily be adapted for the construction of circular shower designs due to precut grooves. Schlüter®-KERDI-SHOWER modules stand out for their particularly easy and reliable installation.

Advantages

Safe and easy installation

- The drain remains accessible during installation to the drain pipe, which allows for safe and easy installation and leak testing.
- The Schlüter®-KERDI-SHOWER boards are sloped at the required angle.
- The proven Schlüter®-KERDI-DRAIN insert with bonding flange guarantees a secure connection to the waterproofing assembly.
- With horizontal drainage, the height of the grate is flexibly adjustable from 3 to 15 mm, making it ideally suited for the material thicknesses of glass mosaics, natural stone, ceramics or other coatings.
- With vertical drainage, covering thicknesses from 3 to 30 mm may be used. The covering support of Design 4 accommodates all covering thicknesses.
- Schlüter®-KERDI-SHOWER boards can be used to create angular and round showers, no special boards are necessary.

Very low construction height

- The height of the levelling board is 60 mm, while the height of the sloped board (depending on the size) is 31–40 mm.
- Without the covering, a total height of less than ≤ 100 mm is possible.
- Low construction height and easy cleaning, due to the inclusion of the odour trap in the grate frame.
- In case of vertical drain connections directly through the load bearing substrate, the levelling board is not needed. In this case, the construction height is even less (22–40 mm plus covering material).

The Schlüter®-KERDI-SHOWER system

Prefabricated modules

Schlüter®-KERDI-SHOWER is especially easy to handle. The two part panels are simply connected together or folded at the construction site (Schlüter®-KERDI-SHOWER-TB).

The Schlüter®-KERDI-DRAIN floor drains and connection sets consist of a small number of individual parts, which makes the installation quick and easy.

Adjustment of the grate assembly

All insert elements allow for horizontal adjustment of the grate (except Schlüter®-KERDI-DRAIN-BASE with grate and frame set KD R10 ED1 SGV).

Drain capacity

Depending on the required drain capacity, you can choose from drain models with capacities from 0.4 to 0.8 litres per sec for combination with Schlüter®-KERDI-SHOWER panels.

Cleaning

The grate and frame sets of Designs 1, 2, and 3 (without odour traps) have an integrated dirt trapping screen. For cleaning Schlüter®-KERDI-DRAIN-BASE sets simply remove the odour trap.

Central drainage

Official sources recommend a central drainage design for showers constructed without barriers for disabled access, since this allows wheelchair users to make optimal use of the shower.

Tile formats

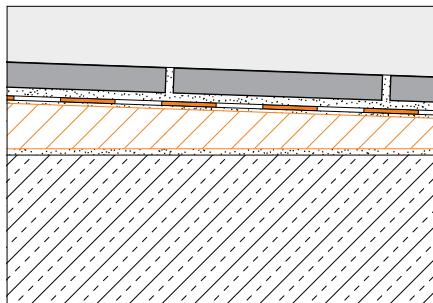

Schlüter®-KERDI-SHOWER does not restrict the selection of tile formats and can be used with any tile format, ranging from large format tile and stone to mosaics. This also applies with specific anticipated traffic loads, for example from wheelchairs (see also product data sheet 8.6).

Precut grooves on the underside of the sloped boards allow them to be easily adapted to construct circular shower designs.

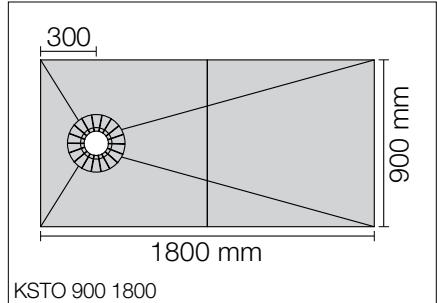

Schlüter®-KERDI-SHOWER-T

Schlüter®-KERDI-SHOWER-T is a sloped (greater than 2%) substrate board for the direct installation of tiles in floor level showers. It is designed to accommodate the floor drain Schlüter®-KERDI-DRAIN-BASE. For ease of transport and handling, it is composed of two parts that simply interlock together. A waterproofing Schlüter®-KERDI collar that covers the entire component is included in the set.

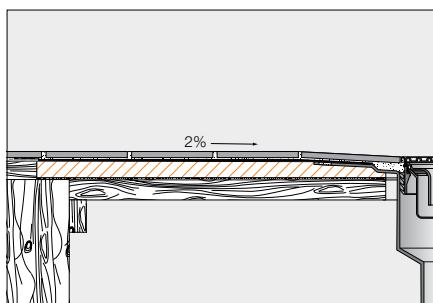

Schlüter®-KERDI-SHOWER-T

Schlüter®-KERDI-SHOWER-TB

Schlüter®-KERDI-SHOWER-TB is a sloped tray with a 2% slope and a pre-adhered coating of Schlüter®-KERDI for the direct installation of tiles and for the connection of the folded parts of the sloped tray.

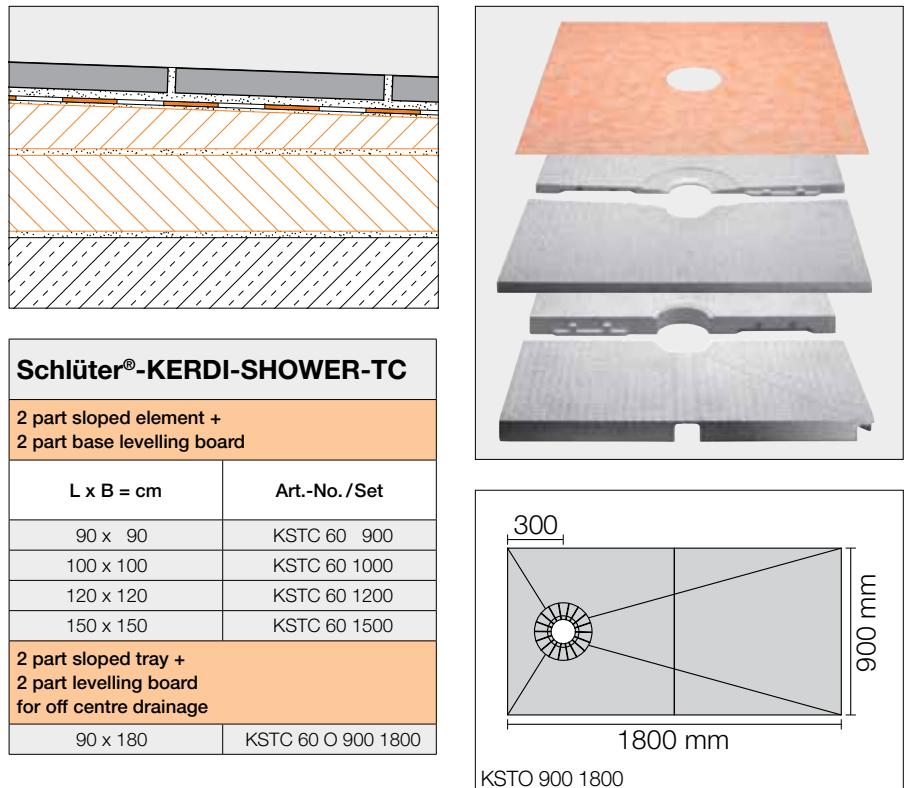

Schlüter®-KERDI-SHOWER-TB	
2 part sloped tray, H = 22 mm for low assembly heights	
L x B = cm	Art.-No./Set
100 x 100	KSTB 1000

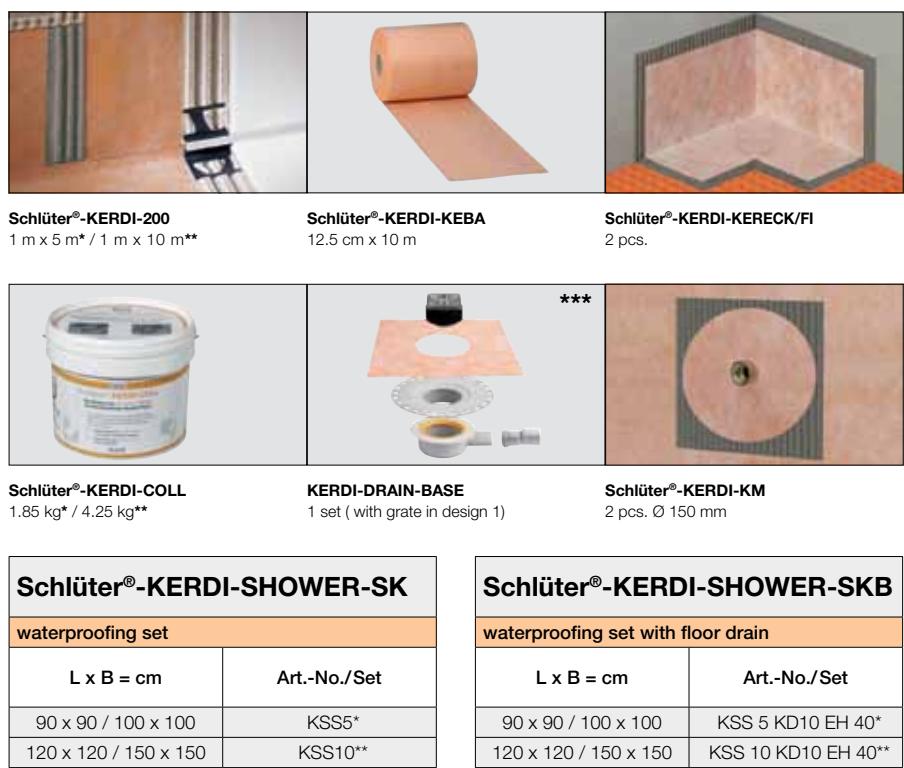

Schlüter®-KERDI-SHOWER-TC

Schlüter®-KERDI-SHOWER-TC is a sloped (greater than 2%) substrate board for the direct installation of tiles in floor level showers. It is designed to accommodate the floor drain Schlüter®-KERDI-DRAIN-BASE and is used in combination with base levelling component to accommodate the drain body and the drainage pipe. For ease of transport and handling, it is composed of two parts that simply interlock together. A waterproofing Schlüter®-KERDI collar that covers the entire component is included in the set.

Schlüter®-KERDI-SHOWER-SK / -SKB

Schlüter®-KERDI-SHOWER-SK is a waterproofing set for floor level showers. It includes Schlüter®-KERDI for waterproofing the wall areas of showers as well as the corresponding prefabricated parts for interior corners and pipe sleeves. The set also includes Schlüter®-KERDI-KEBA sealing band for waterproofing the abutting joints of the membranes and floor-wall transitions and Schlüter®-KERDI-COLL sealing adhesive for waterproofing the sealing bands and prefabricated parts. Schlüter®-KERDI-SHOWER-SK is suitable for conventional floor-level showers and for combination with the floor components Schlüter®-KERDI-SHOWER-T and -TC as well as Schlüter®-KERDI-SHOWER-L and -LC. The waterproofing set Schlüter®-KERDI-SHOWER-SKB also includes a Schlüter®-KERDI-DRAIN-BASE floor drain and can be used for conventional floor-level showers or in conjunction with the floor components Schlüter®-KERDI-SHOWER-T and -TC.

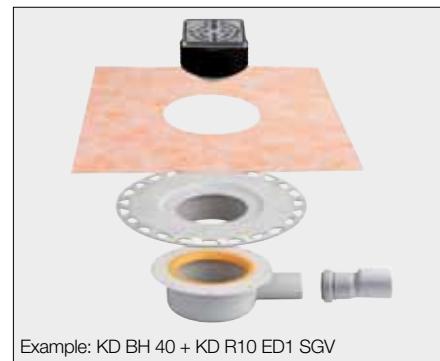

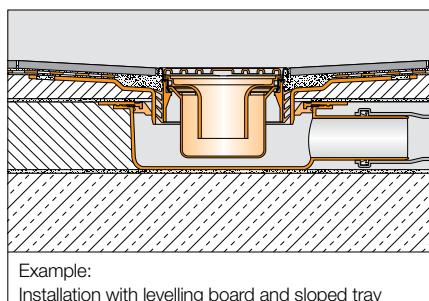

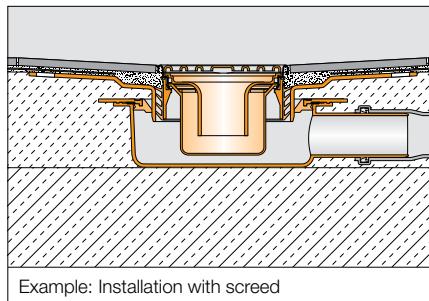

*** Note:

Schlüter®-KERDI-DRAIN-BASE is only included in the waterproofing set with floor drain.

Schlüter®-KERDI-DRAIN-BASE

Schlüter®-KERDI-DRAIN-BASE is an especially low floor drain that is suitable for the installation of conventional barrier free shower designs or for combination with Schlüter®-KERDI-SHOWER floor elements. The odour trap is integrated into the grate assembly and is height adjustable to match tiles or coverings with a thickness of 3 mm to 15 mm. The minimum construction height is just 70 mm for coverings with thicknesses over 6 mm (75 mm for coverings \leq 6 mm), and the drain capacity is 0.4 litres per second. The drain is horizontally arranged with a diameter of DN40 mm and comes with an adaptor to BS 1½". Schlüter®-KERDI-DRAIN-BASE can be combined with seven different grate designs.

Floor level showers and drains

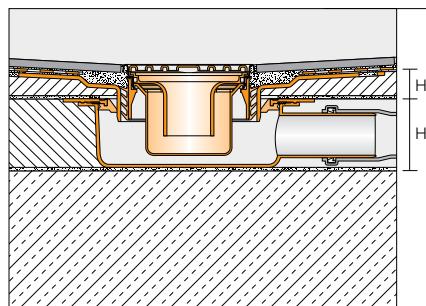

Schlüter®-KERDI-SHOWER boards can be combined with many different floor drains from the Schlüter®-KERDI-DRAIN series, depending on the requirements of the construction site. This allows installers to respond flexibly to the specific requirements of the construction site with regard to drain capacity, assembly height and drain direction. Schlüter®-KERDI-SHOWER offers a fitting solution for every situation.

Horizontal drainage with low assembly height

Schlüter®-KERDI-SHOWER-TC combined with Schlüter®-KERDI-DRAIN-BASE

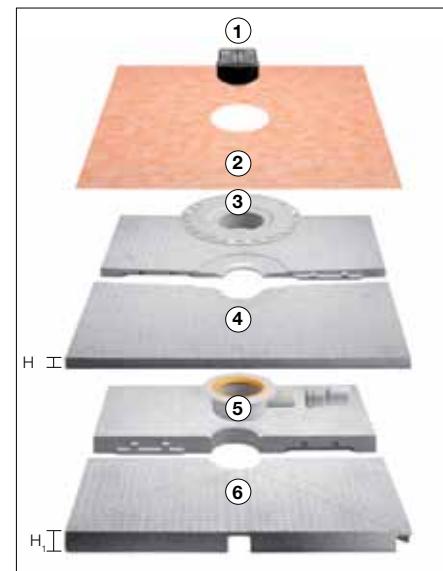

Schlüter®-KERDI-DRAIN-BASE is the ideal choice for low level assemblies. The combination of the specially designed levelling board for insertion of the drain base and pipe and the sloped tray allows for creating assembly heights of 91–100 mm.

Drain capacity of 0.4 litres per second.

(Standard showers have a capacity of max. 0.3 l/s)

3) Bonding flange insert

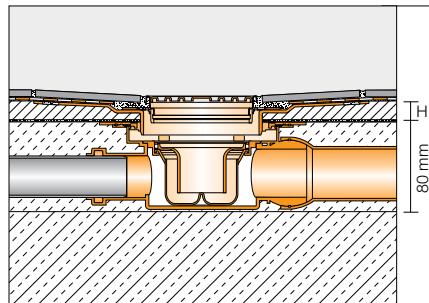

5) Drain body with transition from DN 40 to DN 50

Horizontal drainage

Schlüter®-KERDI-SHOWER-T combined with Schlüter®-KERDI-DRAIN BH 50 GV

The sloped tray Schlüter®-KERDI-SHOWER-T is combined with a KD BH 50 GV floor drain set. The drain body is either installed in the screed or set into the insulation. This configuration offers a total assembly height of 111–120 mm.

Drain capacity = 0.6 litres per second.

3) Bonding flange insert

5) Drain body

Horizontal drainage

Schlüter®-KERDI-SHOWER-T combined with Schlüter®-KERDI-DRAIN BH 5070 GV

The sloped tray Schlüter®-KERDI-SHOWER-T is combined with a KD BH 5070 GV floor drain for increased demands from drain capacity and sufficient assembly height. The drain body is either installed in the screed or combined with the insulation. This configuration offers a total assembly height of 151–160 mm.

Drain capacity = 0.8 litres per second.

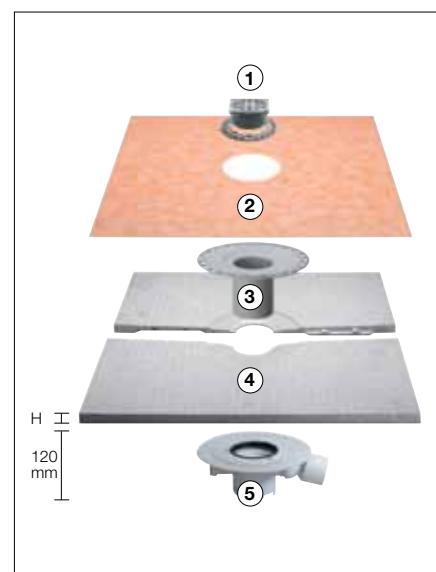

Schlüter®-KERDI-SHOWER-T

1 Apply thin bed adhesive with a 3 x 3 mm notched trowel to adhere the bonded waterproofing membrane Schlüter®-KERDI.

2 Adhere and smooth out the Schlüter®-KERDI membrane.

3 Completely cover the joints with the sealing band Schlüter®-KERDI-KEBA, using the sealing adhesive Schlüter®-KERDI-COLL.

4 Cut out the pipe duct with a utility knife.

5 Apply thin bed adhesive on the level substrate.

6 Set the levelling board in place. Note: Observe the instructions in data sheet 8.6 if sound insulation requirements must be met.

7 For installations over spots of adhesive adjust the levelling board with a spirit level, ensure board is fully bedded.

8 Connect the drain pipe to the Schlüter®-KERDI-DRAIN drain body. If applicable, use the supplied pipe adaptor and ...

9 ... connect it to the wastewater system of the building.

10 Test the drain for leaks.

11 Apply thin bed adhesive on the levelling board.

12 a Interlock the sloped board together ...

12 b ... and set it in place (Note: The connection joint should not be located directly over the pipe duct).

13 Apply thin bed adhesive on the installation area of the drain insert.

14 Apply a suitable lubricant to the sealing lip in the drain body.

15 Push the bonding flange into the drain body and into the adhesive bed.

16 Apply Schlüter®-KERDI-COLL to the flange of the bonding flange.

17 Apply thin bed adhesive to the remaining area with a 3 x 3 mm or 4 x 4 mm notched trowel.

18 Set the Schlüter®-KERDI Collar in place ...

... and smooth it out.

20 a Fully embed the prefabricated corner pieces in Schlüter®-KERDI-COLL.

20 b Use Schlüter®-KERDI-COLL to tightly seal the wall connections with Schlüter®-KERDI-KBEA.

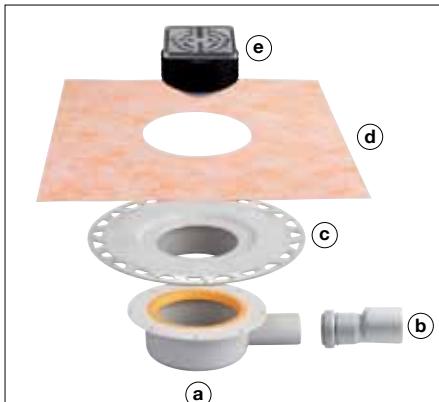

21 Slide the stainless steel grating assembly into the bonding flange.

22 Fill the space below the stainless steel grating with thin bed adhesive and align the grate at the height of the tiles.

23 Prior to using the shower, remove the stainless steel grating and press on the odour trap to check its positioning (if necessary, apply some lubricant to the O ring).

Schlüter®-KERDI-DRAIN-BASE

- e) Design grate with frame and odour trap
- d) Schlüter®-KERDI Collar
- c) Bonding flange
- b) 40 mm adaptor
- a) Drain body
