Movement joints are essential

Although at first glance they don't appear to move, tiles, screed, and concrete are "living" materials. Even massive structures made of these materials are constantly subject to form changes (deformation). Such deformations are caused by drying, loads, changes in moisture content and temperature fluctuations, which can combine and compound one another.

To ensure that deformation does not cause damage, screed and covering assemblies

e.g., tiled floors, must include movement joints, which allow movement to occur limiting stresses which could cause damage to the covering. The requirements listed in BS 5385 parts 1-5, must be observed. These information documents also include specific recommendations regarding the width and positioning arrangements of the joints.

Schlüter®-Systems offers the option of producing movement joints with Schlüter®-DILEX pro-

files. In contrast to conventional sealant joints, such joints are permanently maintenance free. They are installed in conjunction with the tiles, eliminating the need for additional installation requirements. This overview brochure illustrates the installation of profiles to create movement joints as an alternative to the use of elastic sealants.

Movement profiles are distinguished by function

Intermediate joints ...

create a pattern of limited fields in large areas of screed and covering. They must be continued from the surface of the covering to the separating layer under the screed or to the covering of the insulation or waterproofing layer. In door transition areas, the screed should contain movement joints, which are continued in the covering to reduce stresses occurring at these locations and to prevent the transmission of impact sound. Movement joints in the substrate may not be closed or covered with flooring materials.

Structural joints ...

(expansion joints) are joints required for static or engineering reasons, which divide a building in various movement segments. They run through all load bearing and non-load bearing parts of a building and must be continued in the screed construction and the floor covering at the identical location and in the specified width.

This type of damage is preventable with Schlüter®-DILEX movement profiles.

Perimeter joints ...

are movement joints placed in the screed and the covering along walls and construction elements that penetrate the screed, such as columns. They reduce impact sound transmission and absorb the movements of the floor assembly. Edge joints may not be rigidly closed, since this may lead to the formation of sound bridges and tensions in the covering construction.

Our range of movement joints includes cove-shaped profiles for wall to floor transitions and internal wall corners. They are designed to allow for especially easy cleaning.

Connection joints ...

are movement joints placed in the screed and the covering at construction elements such as window openings, doorframes, shower trays and bath tubs.

Intermediate joints

Schlüter®-DILEX-EDP is a stainless steel movement profile, which allows horizontal movement through a tongue and groove connection.

(Product data sheet 4.16)

Schlüter®-DILEX-EDP

Stainless steel V2A

Heights: 8 | 10 | 11 | 12.5 | 14 | 16 | 18.5 | 21 | 25 | 30 mm

Schlüter®-DILEX-KS is a movement profile with edge protection consisting of lateral anchoring legs made of aluminium or stainless steel, which are connected to a replaceable movement zone made of soft rubber.

(Product data sheet 4.8)

Perimeter and corner joints

Schlüter®-DILEX-EK is a two part profile made of rigid/ soft plastic with a tongue and groove connection and an integrated joint chamber for creating durable, flexible and maintenance free perimeter joints between floors and walls or floors and skirtings.
(Product data sheet 4.14)

Schlüter®-DILEX-EK

Colours*

PVC / CPE

Heights: U = 8 | 11 | 15 mm
O = 7 | 10 | 14 mm

Schlüter®-DILEX-HK is a cove shaped profile of rigid recycled PVC with a cove of soft plastic and an integrated joint chamber for wall to floor joints, which conforms to special hygienic and cleaning requirements such as those of the food processing industry or industrial kitchens.
(Product data sheet 4.11)

Accessories: Internal and external corners, end caps, connectors

Schlüter®-DILEX-HK

Colours*

PVC / CPE

Heights: U = 12 mm
O = 9 mm

Schlüter®-DILEX-HKW is a cove shaped profile for internal wall corners and wall to floor joints in applications where only slight movement occurs.
(Product data sheet 4.12)

Accessories: Internal and external corners, end caps

Schlüter®-DILEX-HKW

Colours*

PVC

Heights: 7 | 9 | 11 mm

Connection profiles

Schlüter®-DILEX-AHK is a cove-shaped profile made of aluminium with a special TRENDLINE textured coating. It is suitable for interior wall corners, kitchen countertops or shelving with a ceramic tile covering. The profile can be combined with Schlüter®-RONDEC, -JOLLY or -QUADEC profiles in matching textured surfaces.

(Product data sheet 4.21)

Accessories: Internal and external corners, connectors, end caps

Schlüter®-DILEX-AHK

Finishes*

Aluminium

Heights: 8 | 10 | 12.5 mm

Schlüter®-DILEX-AHKA is a cove shaped aluminium profile for internal wall corners, kitchen worktops or surfaces with ceramic coverings. It is available in a variety of anodised finishes and can be connected to existing coverings on one side.

(Product data sheet 4.21)

Accessories: Internal and external corners, end caps

Schlüter®-DILEX-AHKA

Finishes*

AE, ACGB

Aluminium

Heights: 8 | 10 | 12.5 | 15 mm

Screed to surface joint

Schlüter®-DILEX-EMP is a stainless steel movement profile for screeds. The tongue and groove connections accommodate horizontal movement.

(Product data sheet 4.17)

Schlüter®-DILEX-EMP

Stainless steel V2A

Heights: 35 | 50 | 65 mm

* See foldout for colour key

Screed to surface joints

Schlüter®-DILEX-MP/-MP/V is an expansion joint profile with undercut side walls made of rigid, recycled PVC and a soft CPE expansion zone, complete with extension profiles for use in the laying of screeds. The profile is able to absorb compression stresses, but not tensile stresses.

(Product data sheet 4.3)

Schlüter®-DILEX-MP

PVC / CPE

Extensions:

Colours*

Height: DILEX-MP 35 mm

Heights: DILEX-MP/V 15 | 25 mm

Schlüter®-DILEX-MOP is an expansion joint profile with serrated sidewalls made of rigid, recycled PVC and a grey, soft PVC expansion zone for use in screed applications.

(Product data sheet 4.4)

Schlüter®-DILEX-MOP

PVC

Colours*

Heights: 35 | 50 | 65 mm

Schlüter®-DILEX-EZ 70 is a stress relieving and decorative profile with undercut side walls made of rigid PVC and a soft PVC expansion zone for use in screeds. The extension segments can be removed to adjust the profile height to the height of the assembly.

(Product data sheet 4.2)

Schlüter®-DILEX-EZ 70

PVC
