

PROJECT CASE STUDY

The development surrounded an existing church – the spire can just be seen.

The window surrounds form a strong architectural feature.

This image shows how effectively cast stone can be used in more modern architecture.

Cast stone architectural features for housing development

Client

Galliford Try

Location of Project

Wembley

Project Overview

This was a large project where we supplied window surrounds, column cladding, copings and pier caps, and all to the architect's exact specification, with some of the detailing taking cues from an existing church which the development partly surrounded.

Project Notes

This is a good example of how cast stone architectural features can also be used on relatively modern buildings, rather than just the more traditional.

Client Feedback

"The service we received was excellent with the deliveries supplied on time. One of the strengths was the on-going communication between the design team, the Procter sales team and the site team. We would have no hesitation in working with you again should the need arise." – *Tim Burt, Senior Buyer, Galliford Try*
