

PROJECT CASE STUDY

The two new properties are on the left and show how successfully they match the existing terrace.

Some of the intricate detail in the cast stone products we created can be seen here.

New house build using cast stone architectural features to match adjacent properties

Client

Newcross Construction Ltd.

Location of Project

London SE14

Project Overview

An unusual new house build which essentially extended an existing terrace block, with our cast features including cills, heads, jambs, mullions, highly detailed feature units, string course and door & window surrounds, replicating those on the existing properties.

Project Notes

There was an obvious need to exactly replicate the architectural features on the existing properties, and for this we carefully took dimensions and profile details from them. From there, it was a case of creating CAD drawings for each item, with our skilled joiners then making exact moulds ready for the production process.
