drainage & plumbing systems

AccessPoint

Access for CCTV & Drain Clearance

The AccessPoint offers a secure point of entry into DN70, DN100 and DN150 plastic, ductile and cast iron pipes. It is designed for entry into drainage systems where no man hole exists, or there is no other means of access.

The core drill cuts a hole of 54mm and is supplied with an arbour and a pilot drill. Installation takes less than a minute, although this may increase when cutting into very old cast iron pipe.

Benefits

- Quick and easy installation
- Can be removed and refitted
- Withstands up to 1 bar
- Pre-assembled for direct insertion into the host pipe

The AccessPoint kit includes:

- 10 x Access Points
- 1 x De-burring tool
- 1 x 6mm Allen key
- 1 x 54mm Diamond Tipped Core Drill

Also available in packs of 10 or 20 Access Points, without the tools.

Simple Installation

Determine the required position of the Access Point and mark the entry point.

Drill a hole using the supplied 54mm drill bit.

Remove excess burring or flashing with the supplied tool and wipe clean the inside surface.

Insert the Access Point into the hole so that the curvature of the seal follows the curvature of the main pipe.

Fix the Access point to the pipe using the 6mm Allen key supplied.

The installation of the Access Point is now complete.
