

Easy switch with Sulzer adapter brackets

Creating solutions that provide ease of use and field adjustability are important considerations. Our adapter brackets bring these concepts to life.

Time for change

Over the years, the equipment in your pumping station gets older and the risk of breakdowns and disruptions increases. When it is time to replace your old pump with a new, more efficient one, we can offer both the pump and an easy way to install it. Our submersible sewage pumps type ABS XFP can be fitted with an adapter bracket to match your existing pedestal and guiderail. Choosing the XFP also means lower energy consumption, reduced maintenance costs and blockages.

Simple switch for better efficiency

Any previously installed product may easily be replaced without the need to replace the pedestal and guiderail, simply by using the Sulzer adapter bracket. This way you can save both time and money, during the switch to a more efficient pump.

Find the right bracket – quick and easy

Retrofitting is easy if the discharge size is the same as the pump it is replacing. All that is required is to fit the bracket with the bolts to your new energy efficient XFP pump and re-install it in the pump station using the existing guiderail. Quick and easy!

Don't you think it's
time for change?
