

Inner Strength, Outer Beauty

Warranted powder coated fasteners from SFS,
much more than just good looks

A Truly Bespoke Finish

It is essential that fasteners deliver a level of aesthetics and durability that match the building envelope.

High performance powder coating

The high quality powder coating used on SFS fasteners was developed to keep up with architect's increasingly innovative designs for roofs and façades and to provide increased benefit over the outdated moulded head products that are obtrusive and subject to UV degradation.

The powder coating process results in a robust finish that is excellent for weathering and colour stability in exposed external applications. Choose SFS powder coated fasteners for:

- Over 200 colours
- Bespoke finishes to colour match your project
- UK production with industry-leading lead times
- An unrivalled 12 year colour stability guarantee

Types of Materials

Whereas head colouring is primarily specified for aesthetic reasons, corrosion resistance and structural performance of the fastener is wholly dependent on the fastener material. The material should always be selected after careful consideration of both external and internal environments, as well as any warranty requirement where applicable.

SFS offer fasteners in a range of materials with different levels of corrosion resistance. Carbon steel could typically be warranted up to 12 years, A2 (304 grade) austenitic stainless steel for up to 25 years and A4 (316 grade) austenitic stainless steel for up to 40 years. For more guidance on the selection of fastener materials please refer to SFS's "Designers Guide" or consult our Specification or Technical Teams.

Types of Fasteners

SFS offer a wide range of powder coated fasteners suitable for many roofing, cladding and rainscreen applications.

Hex head

- 8mm hex heads - more discreet than plastic moulded heads and caps
- Available in carbon steel, A2 and A4 stainless steel
- simple to install

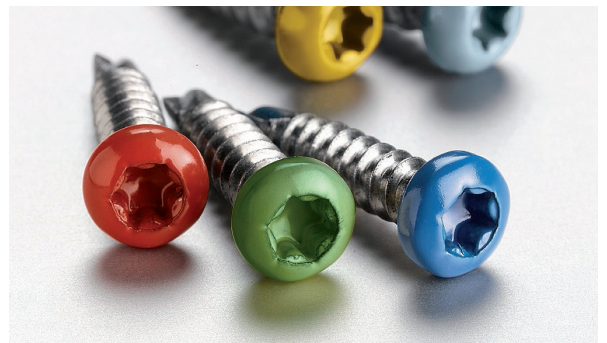

Low profile irius

- Low profile head suitable for wall cladding, feature flashings and twin skin systems
- Available in carbon steel, A2 and A4 stainless steel
- Tamper proof security fastener

Torx & SR internal drives

- Low profile head suitable for a wide range of facades and rainscreen materials
- Available in carbon steel, A2 and A4 stainless steel
- Easy installation with stick/wedge fit

Rivets

- A comprehensive range of head sizes and types available
- Available in carbon steel, aluminium, A2 and A4 stainless steel
- OEM approval from major European panel manufacturers

Recent Case Studies

The Bund Project The Alchemist

Customer	Living Ventures
Architect	Reid Architects
Contractor	Artez Group
Sub Contractor	Longworth
Location	MediaCityUK, Salford Quays
Application	Clad in gold zinc with A4 (grade 316) stainless steel fasteners from SFS were colour-matched for a bespoke finish.

The White Rose Shopping Centre

Customer	Land Securities
Contractor	Morgan Sindall
Sub Contractor	Roofdec
Location	Leeds, United Kingdom
Application	40 fastener variations, many powder-coated to match the different forms and colours of the purpose-made anodised panels in various colours
