

SAFE RAPID ACCESS

Industrial Roof Safety Solutions

- RANGE OF PRODUCTS SUITABLE FOR FRAGILE ROOFS
- PROVIDE SAFE WORKING POSITION FOR MAINTENANCE TASKS
- PORTABLE SOLUTIONS
- SIMPLE EFFECTIVE PROTECTION FOR ROOFLIGHTS AND SKYLIGHTS

Industrial Roofs

Falls through fragile roofs and fragile roof lights cause death and serious injury, with those working in the building maintenance sector being most at risk.

According to the HSE, on average 7 people are killed each year falling through a fragile roof or fragile roof light. These accidents usually occur on the roofs of factories, warehouse and farm buildings where repair or cleaning work is being undertaken.

Accidents do happen, but these incidents are avoidable through careful planning, training, supervision and the use of suitable equipment. Building owners have a duty of care to ensure workers who need to access the roof are safe, while those responsible for the work must make sure that all employees are competent to work at height.

Easi-Cover

EASI-COVER has been designed specifically to protect fragile rooflights which are common on metal profile roofs.

EASI-COVER is component based so is easy to transport get up to the roof level and assemble in-situ. Standard mesh panels are 2m long x 1m wide. 2m or 1m long x 1m wide extension panels are available

EASI-COVER is available in two formats, one which fixes virtually flat to the roof surface, and one which is mounted on small legs so that it is raised above the skylight. In the event of a fall, this ensures the rooflight is not damaged when the cover absorbs the impact.

Features and Benefits

- ▶ Tested to ACR Red Book and EN 1873
- ▶ Component based so easy to transport
- ▶ Mesh panel does not block out the light
- ▶ Easy to fit, keeping installation costs down
- ▶ Variable height for different shaped rooflights
- ▶ Tube can be colour coated for greater visibility
- ▶ Extension panels for extended widths and lengths
- ▶ Components hot dip galvanised for durability

Board-Walk

BOARD-WALK is an open mesh walkway which allows access from eaves to the ridge while spreading the load on support battens to provide the user with a safer working position. The system is lightweight, easily transportable and suitable for fragile roofs.

Each system is designed to fit individual roof sizes and configurations and can be installed to run vertically up, or down, or horizontally across the roof. The 2m, 3m & 4m sections are easily linked together and include an integral work positioning line.

Valley-Walk

VALLEY-WALK is a mobile walking frame for one or two persons, designed to provide mobile access along valley gutters.

Lightweight, easy to assemble and adjustable for most roof angles, VALLEY-WALK features cushioned outriggers and safety mesh which provide good visibility and safe weight distribution.

Roof-Walk

ROOF-WALK is a fully guarded rolling platform mounted on twin tracks to allow movement up and down the roof.

Available as standard 4.6m or specially made 2.5m platform, the system runs up and down twin modular 4m lining track sections which are fitted with safety mesh and support battens.

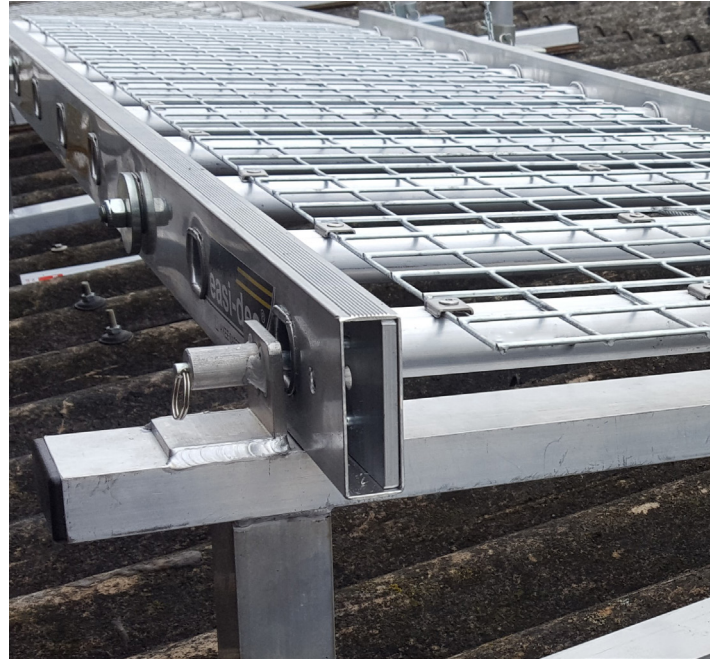

Features and Benefits

- Suitable for fragile roofs
- Adjustable to pitches up to 30 degrees (Valley-Walk - 85 degrees)
- Easily transportable
- Simple and quick to use
