

Keylex Digital Locks Provide Staff Access at Weston's New College

04 November 2016

Blog » Keylex | Mechanical Digital Locks

Keylex 700s at the new North Somerset Enterprise & Technology College Campus

Keylex mechanical digital locks have been installed on four Staff Room doors and the First Aid Room at the new North Somerset Enterprise and Technology College campus, just completed by main contractor BAM Construction.

The locks were supplied by Relcross via our established trade partner IRM (Bristol) Ltd of Yate. This solution provides a common access control solution (the Keylex product is used elsewhere at the college) allowing immediate access for authorized users without the need of access control credentials such as proximity cards.

Keylex 700 Series for European Style Cylinder Lock Cases

The Keylex 700 series was used again at the College and provides standard duty, high security access control on doors where a flexible Euro profile key system is required. The narrow stile Keylex 700 design, with its built-in clutch mechanism protecting the lock furniture, will suit all stile widths down to 45mm and is particularly suited for use on aluminium and hollow metal door sections. The Keylex 700 can be expected to give many years' service if specified and maintained correctly.

Suitability

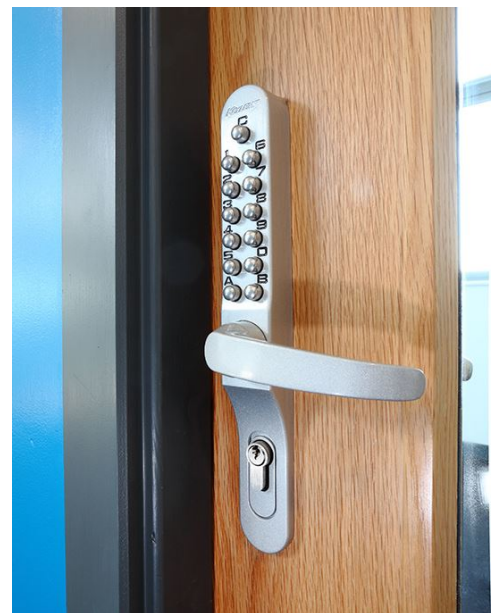

The Keylex 700 lock body and internal mechanism construction is cast zinc and solid brass with stainless steel code buttons and is suitable for use on external perimeter doors & all internal doors -

Timber

Aluminium

Steel

Composite

Relcross Sales and Marketing Director, Stuart McMaster, said 'while electronic access control can be very effective there are still circumstances where a mechanical digital lock is the best option. It's a quick fix solution. No wiring is required, there are no batteries to replace, just solid mechanical reliability for which Keylex locks are renowned.'

North Somerset Enterprise and Technology College is a free school for 14-19 year olds and has a strong focus on science, technology, engineering and maths. The school opened in 2014 based at Weston College's South West Skills Campus but has now moved to its brand new, purpose built home. The new £12m building is in Weston-super-Mare's Junction 21 Enterprise Area and includes an all-weather sports pitch, canteen, lecture theatre, sports hall and technology and enterprise spaces, as well as a purpose-built science floor with laboratories and an outdoor terrace for experiments. NSETC is part of the Inspirational Futures Trust, which is sponsored by the Weston College Group.
