

Stair Nosings & Edgings

Introduction

Dear Customer,

Contained in this 2019 Dedicated Stair Nosings & Edgings Catalogue, are hundreds of stair nosing variations for numerous installations.

We trust you will find a suitable profile for your project and look forward to being of assistance in supplying you with "in flooring terms", the final detail.

We recognise the choice available could be time consuming to scan through all pages and we are more than happy to suggest suitable profiles upon request of a customer enquiry.

Since 1986, we maintain our objective to produce the finest quality flooring profiles and accessories.

Drawings & Illustrations

The profiles depicted in this catalogue are shown approximately 75% scale with every effort having been made to ensure accuracy of illustration and dimensions given. However, we recommend that samples be requested where critical sizing is required.

Similarly, where infilling colours and metal finishes are shown, these are representative only. Please request a sample for true colour/metal finish referencing.

C.A.T. reserves the right to alter or change, within reasonable limits, the published dimensions of its profiles, having regard to the nature of the product and its intended use.

C.A.T. Logos, Brands and Products

Please contact our marketing department should you wish to include C.A.T. logos, brands or products in your own marketing material or on your website.

C.A.T. and BIM (Building Information Modelling)

To assist designers and architects, C.A.T. are currently working towards producing product data sheets compatible with BIM Level 2 requirements. Please contact our office if you require these data-sheets for any of our profiles you wish to incorporate in your specification. 3D images will also be provided upon request.

Important Information

Orders for brass profiles are always supplied as 'Polished Brass' unless a special finish is specified at the time of ordering.

When selecting brass profiles, please consider that all brass will tarnish in the atmosphere over a period of time dependent upon the environment in which it has been installed.

The contact with fluids, including water and cleaning chemicals, will accelerate the tarnishing process causing staining which will be difficult to remove.

Antique Brass and Antique Bronze finishes are a chemically applied process and are hand finished with a variance from batch to batch. They are not foot-traffic resistant and are designed to create an aged, unpolished effect.

For maintenance instructions, please visit www.thecatweb.com or call our sales office for further assistance.

Recycling

Recyclability is one property which helps to establish the 'green credentials' of a material, that is how 'environmentally friendly' it is.

Brass consists of alloys predominantly copper with small amounts of zinc, lead, aluminium and manganese to provide improved properties.

The brass industry throughout the world depends on the recycling of brass scrap. Making brass from copper and zinc would be uneconomical and wasteful of raw materials so, since new brass products are made from recycled scrap, brass is said to be sustainable.

In the UK, brass manufacturers use almost 100% brass scrap.

Interesting Fact: Copper is naturally present in the Earth's crust and is the oldest metal used by man. The first copper coins date back to 8700BC.

This symbol appears throughout this catalogue to denote that certain products or supply variations are available 'TO SPECIAL ORDER'

Please check with the sales office for availability details prior to ordering.

Fabrication & Special Services

Fabrication And Special Services

Stair Nosing Fabrication

Work In Progress - BN8 stair nosing curving

Fabrication And Special Services

Stair Nosing Fabrication

Curving

Whilst modern buildings staircase design generally does not have curved steps, historical buildings frequently have staircases with curved treads.

A staircase may have one or several curved feature steps at the ground floor or continuous shaped treads on all floors.

Shapes can vary from very gradual curves to treads with a radius at one end (a 'hockey stick'), our fabrication team regularly form all shapes and all sizes to customer templates.

Always seek advice on profile suitability from our sales team.

Gradually curved stair nosing

Stair nosing with formed radius end (a 'hockey stick')

Fabrication And Special Services

Stair Nosing Fabrication

Curving, Capped Ends, Mitred & Welded Returns, Cut Mitres Unwelded

Curving

Curved stair nosing formed to template.

Cut Mitres Unwelded

Unwelded mitres for cutting in on site where welded mitres are not suitable.

Mitred & Welded Returns

Mitred and welded returns are often used on treads in historical buildings where there are treads of differing size, including theatres and public buildings.

Capped Ends

Capped ends can be produced on the end of stair nosings where there is an open string for aesthetic reasons.

Please note; all fabricated stair nosings are supplied oversize for trimming on site.

Aluminium Stair Nosings With Capped Ends

Fabrication And Special Services

Stair Nosing Fabrication

We provide a fabrication service for the forming and shaping of stair nosings in brass and aluminium. In addition to the curving of stair nosings we can also produce nosings with welded capped ends and mitred and welded returns. Please contact the sales office for advice on suitability and availability of profiles for curving dependent upon the shape of the step.

Lead Times

Production lead times for curves are typically 14 working days, 21 working days for nosings with special finishes.

For larger orders in excess of five curves, please contact the sales office for advice and lead times.

Fabrication Charges

When pricing for curved stair nosings, an allowance for wastage of 25% must be made in the manufacturing process.

For quantities, we are happy to provide costs upon receipt of instruction and template.

How To Take A Template

All fabrication requires customer templates on hardboard or similar rigid material. If the template has been taken using a paper material, it should then be transferred to hardboard or similar rigid material. The step edge should be free from existing floor coverings and where required made good with repairs before the template is taken.

Offer template material on top of stair tread and, with a marker pen, draw around the curve on the underside of the template at the stair edge (Fig.1).

Ensure the drawn line is uniform, cut along the mark, then offer the shaped template to the step and make adjustment as required.

Information Required On Template (Fig.2)

- Nosing profile and finish
- Customer name and job reference
- Order number
- Top side of template
- Front edge of template
- Insert colour if PVC infill
- Special drilling instructions
- Allowance (if any) for new floor covering
- Date job required

Please note; all fabricated stair nosings are supplied oversize for trimming on site.

Fabrication And Special Services

Modifying A Standard Stair Nosing Profile

From our extensive range of stair nosings it is often possible to modify an existing standard section to better suit the customers ideal profile.

This modification of a profile can be a cost effective and speedier alternative to the production of a specialist extrusion die and minimum quantity order levels.

The modification of a stair nosing profile means machining of a portion of the standard section to dimensions supplied by the customer.

Typical examples of modifications to a standard extrusion (profile shown is AN6):

All modifications to the profile are made to customer agreed dimensional drawings. Upon enquiry, C.A.T. will produce a 'Proposal For Supply' drawing to illustrate what is understood to be the customer's requirement. Once confirmed as correct by receipt of an official order, the illustration is issued to our fabrication shop for the manufacturing process to begin.

Whatever the fabrication or modification, please check with the C.A.T. sales department or technical representative to determine that the chosen profile is suitable for the purpose.

3D Printing In Our R & D Department In Cornwall

Reflex Movement Joint
3D model

PVC Expansion Profile
3D model

3D Printing

The benefits of having a 3D print include:

- Have a bespoke sample of a proposed solution modelled and made that can be put to the test physically and aesthetically as being fit for purpose.
- 3D print items up to 22.3cm x 22.3cm x 20.5cm using industry standard 3D printer.
- Create high-resolution 3D prints down to layer resolutions of 50 microns using Fused Deposition Modelling.
- Print strong parts with new Tough PLA from Ultimaker.
- Choose from a standard range of material types and colours. Rigid and flexible prints are possible with many more materials/colours able to be utilised upon request.

The Process

The 3D printing process exists for the purpose of making three dimensional solid objects from digital files. It is often referred to as 'additive manufacturing' because the object is created by laying down successive layers of material until the required three-dimensional shape is created. The time needed and the necessary initial investment required to produce a prototype part compared to traditional methods is dramatically reduced by this method.

The ability to rapidly prototype a design lends itself very well to the 'bottom-up' approach to solution creation. The designer can trial and error a design quickly in the real world to decide upon its efficacy before either making more tweaks or committing to the final form with confidence.

Required Information

We would be able to produce finished models from a sketch with a few key dimensions, a 2D CAD file of concept, or a 3D Model of the design. Common file types accepted are DWG, DXF, STL, STEP, IGES, OBJ.

Flexible or rigid filament can be specified, along with material type and colour.

If a specified level of detail is required, the layer thickness can also be specified (microns).

Lead Times

Lead times will always depend upon complexity, size and quality. We will always endeavour to supply our 3D printed samples within 7 days of a request.

The Cost

Due to the bespoke nature of 3D printing, the variety of complexity and build times is great. Therefore we can only provide a quote based on your eventual STL file. To get a quote, please send a file or drawing to us, stating what quality, material and colour you require and how many samples you need printing.

Fabrication And Special Services

Submitting Plans & Drawings

Where it is impractical to supply a template of the required curve, a copy of the project drawing should be submitted. This must indicate radius, overall length (arc and any adjoining straight) and all other information necessary to effect an accurate supply. It is the responsibility of the customer to scale from architect's drawings.

The length of this straight varies dependent upon the radius dimensions. An allowance should always be made when ordering formed profiles, particularly with this type of curve.

Plan drawings must include all relevant information such as whether the curve is to be concave or convex, the overall length of the arc and of any straight sections.

Where a concave curve is to adjoin a convex curve, they must be separated by a short straight section.

Whatever the fabrication or modification, please check with the C.A.T. sales department or technical representative to determine that the chosen profile is suitable for the purpose.

Stair Nosings - Technical Information & Installation

General

C.A.T. stair nosings are manufactured to the highest specification in brass and aluminium. A selection of nosings have ribbed treads, others have castellated treads and there are those with PVC infills which are available in a range of colours. BTI49.5, ATI49.5 and ATI37.25 tread inserts are also available to provide for an all-metal installation with concealed fixings

Selection

Choose from nosings in various gauges and shapes to accommodate different step edges and floorings. A number of nosings are designed with a diminished edge for retro installation on hard floorings, including vinyl, terrazzo, wood, etc.

Finishes

Brass: Polished Brass • Satin Brass • Antique Brass • Antique Bronze.

Aluminium: Polished • Satin • Mill, plus DHC finishes on stair edge profiles AN20/3 and AN21/3.

Please note that we are constantly developing new finishes. Please contact the C.A.T. sales office for the latest developments.

Data

Brass alloy to BS 2874 : 1986

Aluminium alloy to BS 1474 : 1987

PVC to BS 6746 : 1990

Measuring Steps

When measuring stair nosings steps should be numbered from top to bottom, indicating floor levels, flights and landings for the cutting and installation plan.

Staircases with open strings should be measured oversize by 50mm for cutting on site.

A measuring/ordering sheet can be found in this catalogue or call the C.A.T. sales office for advice.

Installation

It is highly advisable when installing stair nosings to use screw fixings and a suitable adhesive after ensuring that treads and risers are in good order. C.A.T. recommend the use of STYCCO FLEX from F. Ball & Co Ltd for this purpose.

Stair Nosings With Ribbed And Castellated Treads

Can be pre-drilled for screw and adhesive fixing, alternatively nosings can be supplied undrilled for adhesive fixing only if suitable and requested.

Stair Nosings With PVC Infills & ATI/BTI Infills - Retro Fit

Retro fit option when installing stair nosings with PVC, ATI and BTI infills. Specify retro fit for a neat, concealed fixing finish.

Retro fit nosings are supplied cut to size with pre-drilled channel for countersunk screw fixings. On site, having secured nosings to treads with screws and adhesive, peel away protective cover from adhesive carrier tape, insert infill into channel applying pressure ideally with a roller to ensure a good bond along the entire length of the tread.

Infills should be fitted at normal room temperature, not in cold environments, to avoid the possibility of contraction. Infills supplied oversize for cutting in.

Stair Nosings With PVC Infills With Concealing Plugs

Stair nosings are supplied pre-drilled and affixed with screws and adhesive.

A small 'dab' of adhesive is applied to screw heads and concealing plugs gently tapped level with the infill.

Installation Using Adhesive Only

Whilst C.A.T. recommends that all nosing profiles are fixed with screws and adhesive, it recognises that in some instances an adhesive fixing only is preferred. In these instances we recommend the use of Stycco Flex rapid curing flexible adhesive from F. Ball & Co.

Please contact the sales office for details.

When adhesive only is used, ensure adequate cure time is allowed before allowing pedestrian access to the step(s).

Stair Nosings - Infill Types & SRVs

Slip Resistance and C.A.T. Stair Nosings

C.A.T. stair nosing infills and treads have been independently tested for slip resistance values (SRV).

For use in dry conditions, all our stair nosings and infill test results show a low risk of slip, contributing to the overall safety aspect of interior staircase installations.

We also manufacture a range of purpose designed stair nosings for use in external or wet area, which also show low risk of slip in wet conditions. The values published are for the normal direction of travel when installed on stairs, i.e., ascending and descending.

It must be noted that many factors will contribute to safety of stairs, not solely the floor covering or the stair nosing fitted. Type of footwear worn, poor maintenance, obstructions, surface contaminants, hurrying, distraction and the influence of alcohol and drugs all have a significant impact on stair safety.

End users and facilities managers should consider regular inspection of stair installations and to act to minimise the risks within their control.

Please contact our sales office for more information and advice.

Normal direction of travel - ascending and descending

Test Method

The independent test method used is the Pendulum 4S in conjunction with the guidelines recommended by the UK Slip Resistance Group. UK Slip Resistance Group classified the degree of slip resistance as shown in the table opposite:

Classification	*PTV
High Slip Potential	0 - 24
Moderate Slip Potential	25 - 35
Low Slip Potential	36 +

Stair Nosings - Infill, Colour Options & LRVs

Light Reflectance Values (LRV)

LRV is a measurement which expresses the percentage of light that is reflected from a surface with lighter finishes at the upper end of the scale and darker finishes at the lower. Designers of buildings need to comply with the building regulations applicable to the structure under consideration. Since 2004 guidance has existed on access to and use of buildings. The guidance is particularly concerned with provisions to assist the disabled, including those who are visually impaired.

The guidance highlights the need for certain surfaces and features to "contrast visually" with their surroundings. This is relevant to a wide range of non-residential buildings including, hospitals, schools, hotels, theatres, etc.

PVC Infills

Castellated

Textured

The current guidance in the regulations as in the relevant codes of practice BS8300:2009 is that adequate visual contrast is provided if the Light Reflectance Value (LRV) of the contrasting areas exceeds 30 points, "i.e., the contrast between the stair edging and the floor covering". The testing equipment used to assess the LRV of C.A.T. product finishes is an integrated sphere spectrophotometer.

Aluminium Stair Nosings With PVC Infills

Top and bottom steps defined by contrasting colours.

NEW!

Black Anodised aluminium stair nosings

Architects and designers have increasingly requested that we manufacture stair nosings in an all-black finish which look sharper and more appealing than existing black flexible PVC options.

After testing various finishes, C.A.T. have introduced a high quality black anodised finish to a selection of our nosing profiles.

The result is a range of fantastic, modern, decorative nosings to help designers make a quality statement with their interior design.

Anodising aluminium hardens the surface, making it more scratch resistant than a painted finish. However, heavy foot traffic and careless goods handling can wear through the surface and reveal the natural aluminium colour beneath.

Black anodised nosings with metal treads and inserts are suited to stairs with low to medium traffic volumes. For more heavily trafficked stairs use nosings with castellated PVC infill for a longer lasting black finish.

Finishes depicted in this price list are representative only and are subject to print interpretation. For accurate referencing, please request a sample from the C.A.T. sales office.

Olympic™ Heavy Duty Aluminium Stair Nosings
for heavy footfall & wet environments

Olympic™ Heavy Duty Aluminium Stair Nosings,
Stair Tread Inserts & Insert Discs

for heavy footfall & wet environments

Olympic™ Carborundum Infill

Properties

The principal constituent of Olympic Carborundum is crystalline Aluminium Oxide, otherwise known as Corundum; the second hardest mineral on the *Mohs Scale to industrial diamond. This hardness ensures durability when used in stair products which are required to withstand heavy footfall and the naturally angular shape of its grain is ideal for providing anti-slip in wet environments.

**Mohs scale: rough measure of the resistance of a smooth surface to scratching or abrasion, expressed in terms of a scale devised (1812) by the German mineralogist Friedrich Mohs. The Mohs hardness of a mineral is determined by observing whether its surface is scratched by a substance of known or defined hardness.*

Aluminium Oxide (Corundum)

Hardest	1	Diamond
	2	Corundum
	3	Topaz
	4	Quartz
	5	Orthoclase
	6	Apatite
	7	Flourite
	8	Calcite
	9	Gypsum
Softest	10	Talc

Mohs Scale

In Olympic Carborundum Infill, the Aluminium Oxide grains are contained within a carefully formulated resin and hardener mixture which, when cured, not only binds the grains together but also binds the whole of the infill to the host stair nosing profile. The result is an integral product which is impervious to water ingress.

The inclusion of Aluminium Oxide throughout the whole of infill ensures that the installed product offers effective slip resistance long after other products in which it is incorporated only as a surface layer.

Aluminium Oxide throughout
(Carborundum)

Aluminium Oxide as a surface layer
(eg. as in GRP flooring products)

Slip Resistance Values

The Pendulum Slip Test is the preferred method of the UK Slip Resistance Group and of the HSE for assessing the potential risk to a pedestrian of slipping on a walking surface.

Olympic Carborundum Infill has been independently slip tested with the results shown in the table below:

Pendulum Test Machine
(image courtesy of HSE)

Potential For Slip	Pendulum Test Value (PTV)
High Slip Potential	0-24
Moderate Slip Potential	25-35
Low Slip Potential	35-65
Olympic Carborundum	86 (in wet conditions)

Interpretation of Pendulum Test Value (PTV)
(UK Slip Resistance Group Guidelines Issue 3 2005)

Olympic™ Heavy Duty Aluminium Stair Nosings, Stair Tread Inserts & Insert Discs

for heavy footfall & wet environments

Installation - Stair Nosing Profiles

CAT recommends that stair nosing profiles are bedded onto a mastic medium suited to the installation site and then mechanically fixed.

Fixing is through the carborundum in certain profiles and through the aluminium in others. In all cases the screw heads remain visible in the finished installation and so stainless steel screws are recommended.

Mechanical Fixing

Using an adhesive as well as a mechanical fix will not only further ensure that the profile is correctly anchored but will also remove the risk of rattle caused by any minor unevenness in the surface of the substrate.

Fixings

Because the fixings remain exposed in the completed installation, we recommend the use of stainless steel screws.

Whilst the pre-drilled/countersunk hole is for No.8 heads, the screw length should be that suited to the particular application but not less than 25mm long for fixing 5mm profiles and 30mm long for fixing 7mm profiles.

Adhesive Only Fixing

When there is no choice but to use adhesive only fixing, apply sufficient beads to the underside of the profile to ensure that when it is pressed into place, the adhesive is spread across the whole of the underside. Once in position, allow sufficient cure time below allowing pedestrian access.

Installation - Stair Tread Insert Strips & Discs

Stair Tread Insert Strips and Discs are always affixed using adhesive.

Stair Tread Insert Strips

Strips should sit between 0.5mm and 1.0mm proud of the step surface when installed and therefore a preformed channel in the substrate should be created which is of adequate dimensions to accept the strip and sufficient adhesive to affix it.

Apply the adhesive into the channel, insert the strip and press firmly into place but without causing oozing of the adhesive onto the visible surfaces.

Allow adequate cure time of the adhesive before allowing pedestrian access.

Stair Tread Insert Discs

Discs should sit between 0.5mm and 1.00mm proud of the step surface when installed and therefore a preformed hole should be created which is of adequate diameter and depth to accept the disc and sufficient adhesive to affix it.

The remainder of the installation is as for Stair Tread Insert Strips.

For bedding and for adhesive fixing, CAT recommends Stycco Flex Rapid Curing Flexible Adhesive by F. Ball & Co. Ltd. Please refer to F. Ball & Co. Ltd. published Product Data Sheet for preparation/application information.

Olympic™ Heavy Duty Aluminium Stair Nosings

For heavy footfall and wet environments.

Examples of 5mm Modular Combinations:

Sit-On application:
Approximately 142mm of cover using
Olympic AN51, Olympic ANEXT & Olympic ANRE25

Sit-On application:
Approximately 82mm of cover using
Olympic AN81 & Olympic ANRE25

Sit-On application:
Approximately 113mm of cover using
Olympic AN52 & Olympic ANRE25

Sit-On application:
Full going cover using
Olympic AN52 & multiples of Olympic ANEXT

Sit-On application:
Full going cover using
Olympic AN82 & 3-4mm GRP aggregated sheet

Sit-In application:
Approximately 117mm of cover using
Olympic AN51 & Olympic ANEXT

Brass Stair Nosings With Ribbed Treads

Profile BN1 in Antique Brass finish

General

Brass stair nosings with ribbed treads provide a stylish alternative to nosings with PVC inserts. Typical installations where this product type is specified include, theatres, museums, public houses and listed buildings where traditional design is specified.

Finishes Available

Polished brass has historically been the finish of choice though antique brass and antique bronze are becoming more and more popular creating a more subtle effect which gives the appearance of age. Satin brass is a relatively new finish for this profile range and offers a softer, matt finish without the high level of reflectiveness that polished brass can create.

Selection

The range includes sections for bullnose, right angle and rakeback stairs. Square back sections to meet with flooring on stair tread and ramp, feathered finish for installation on top of hard floorings, including timber and stone.

Supply

Supplied cut to customer sizes, nosings can be supplied with countersunk holes for screw fixings or undrilled for adhesive only fixing.

For fixing advice please call the C.A.T. sales office for advice.

Fixing Options:

Countersunk screws and adhesive

Adhesive Only

Terms & Conditions

Definitions:

Company: Carpet Accessory Trims Ltd (CAT Ltd).
Units 24a,b, & c, Park Avenue Estate, Sundon Park, Luton LU3 3BP

Customer: Any firm, company or person who purchases products from the Company.

Goods: Any goods or products offered for sale by the Company.

Contract: Any agreement between the Company and the Customer for the supply of goods incorporating these Terms and Conditions.

General

- 1.1 All quotations are made and all orders are accepted subject to the following conditions. All other terms, conditions or warranties whatsoever are excluded from the contract or any variation thereof unless expressly accepted by the Company in writing. Any quotation issued by the Company shall not constitute an offer and shall not be binding on the Company. Each order or acceptance of a quotation for Goods by the Customer to purchase the Goods shall be deemed to be an offer by the Customer to purchase Goods from the Company and is entirely at the discretion of the Company and is subject to these conditions.
- 1.2 If any provision of the Contract is held by a court or other competent authority to be invalid or unenforceable in whole or in part, the validity of the other provisions of the Contract and the remainder of the provision in question shall not be affected.
- 1.3 Acceptance of delivery of Goods shall constitute acceptance of these conditions where acceptance has not previously been communicated by the Customer to the Company.
- 1.4 Orders are accepted (save where the contrary is expressed in writing in the acceptance) subject to the availability of stocks of the Goods ordered at the time specified for the delivery.
- 1.5 The Customer shall not be entitled to rely on any typographical, clerical or other error or omission in any sales literature, quotation, price list, web site, acceptance of offer, invoice or other document or information issued by the Company and the Customer acknowledges that any such error or omission shall not form part of or be incorporated by reference into the Contract. Any such error or omission shall be subject to correction without any liability on the part of the Company.
- 1.6 If any Statement or representation has been made to the Customer by the Company, its servants or agents, upon which the Customer relies, other than the documents enclosed with the Company's quotation or acknowledgement or order, then the Customer must set out that Statement or representation in a document to be attached to or endorsed on the order and in any such case the Company may confirm, reject or clarify the point and submit a new quotation.
 - 1.6.1 The Company shall not be liable for any loss or damage whatsoever arising from failure by the Company to perform the Contract, whether wholly or in part, which is caused by:
 - (1) default by our suppliers, or
 - (2) any cause whatsoever beyond our control.
 - 1.6.2 Our inclusive liability for failure to perform the Contract, whether wholly or in part and for negligence (other than for negligence resulting in personal injury or death) shall be limited to:
 - (1) in cases in which Goods are returned complete and in the condition in which they were dispatched, the supply of replacement Goods.
 - (2) in all other cases, the payment of a sum not exceeding the proportion of the net invoice price which is attributable to the goods which are the subject of the claim.
 - 1.6.3 In no circumstances will the Company be liable for indirect or consequential loss or loss of profits.

Delivery

- 2.1 Time for delivery is given as accurately as possible but is not guaranteed. The Customer shall have no right to damages or to cancel the order for failure for any cause to meet any delivery times stated.
- 2.2 The date of the delivery shall in every case be dependent upon prompt receipt of all necessary information, final instructions or approvals from the Customer. Alterations by the Customer in design specifications or quantities required may result in delay to the delivery.

- 2.3 Failure by the Customer to take delivery of or to make payment in respect of any one or more instalments of Goods delivered hereunder shall entitle the Company to treat the Contract as repudiated by the Customer.
- 2.4 At the discretion of the Company deliveries to site may be made upon receipt of the Customers written instructions. The Customer must ensure that there is someone available at the delivery site address, aware that the delivery is due and is ready to receive the Goods from the delivering vehicle. If delivery cannot be made due to these conditions not being met and the consignment is returned to the factory, the Company may impose a reasonable charge for storage and re-delivery.
- 2.5 The Company shall endeavour to comply with reasonable requests by the Customer for postponement of delivery but shall be under no obligation to do so. Where delivery is postponed otherwise than due to default by the Company, the Customer shall pay all costs for storage and transportation occasioned thereby and payment for the Goods shall be made in accordance with these conditions.
- 2.6 Any packaging supplied by the Company unless otherwise expressly agreed is intended to provide adequate protection throughout normal conditions of transit of usual duration.
- 2.7 The Customer is responsible for unloading the delivery and shall be responsible for loss of or damage to the Goods during the course of such unloading. It is the responsibility of the Customer to inspect the Goods on delivery in respect of design, colour, condition, quantity and quality. The Company shall not be obliged to replace Goods once they have been cut and installed.
- 2.8 A delivery note or noted document for the Company must be signed on receipt of the Goods.

Risk and Title

- 3.1 Risk shall pass to the Customer so that the Customer is responsible for all loss, damage or deterioration to the Goods:
 - 3.1.1 If the Company delivers Goods by its own transport or in accordance with a specific contractual obligation arranges for transport of the Goods at the time when the Goods or relevant part thereof arrive at the place of delivery, or
 - 3.1.2 in all other circumstance at the time when the Goods or a consignment or other part thereof leave the premises of the Company.
- 3.2 Title to the Goods or any relevant part thereof shall only pass to the Customer upon the happening of any of the following events:
 - 3.2.1 The Customer has paid the Company all sums due and payable by it to the Company under the Contract and all other prior Contracts between the Company and the Customer, or
 - 3.2.2 when the Company serves the Customer notice in writing that the title in the Goods or such part thereof has been passed.
- 3.3 The Company may receive goods in respect of which title has passed to the Customer at any time and the Customer hereby licenses the Company, its office, employees and agents to enter upon any premises of the Customer for the purpose of satisfying itself that the condition 3.4 below is being complied with by the Customer or of the recovery of any Goods in respect of which property has not passed to the Customer.
- 3.4 Until title to the Goods has passed to the Customer pursuant to the terms hereof it shall possess the Goods as a bailee. If the Company so requires the Customer shall store the Goods separately from other Goods and shall ensure they are clearly identifiable as belonging to the Company.

Cancellation

- 4.1 Cancellation will only be agreed to by the Company on the conditions that all costs and expenses incurred by the Company up to the time of cancellation and all loss of profits and other loss or damage resulting to the Company by reason of such cancellation will be paid forthwith by the Customer.

Prices

- 5.1 All prices are, unless otherwise stated, quoted net ex-works exclusive of V.A.T. and are subject to fluctuation in the event of any increase in such costs of labour due to local or national awards or increases in costs of materials and overheads. Any increase in such costs during the period of the Contract will be added to the quoted price.

Terms & Conditions

- 5.2** In the event of any alteration being requested by the Customer and agreed by the Company in design or specification, the Company shall be entitled to make an adjustment of the Contract price corresponding to such alteration.
- 5.3** Prices quoted are for total quantities shown and the Company may not offer the rates or prices quoted for smaller quantities.
- 5.4** All deliveries are free other than orders or part orders below the minimum carriage paid order value currently applicable, as specified in a current quotation or, in the absence thereof, the Company's prevailing price list.

Terms Of Payment

- 6.1** Unless otherwise agreed by the Company in writing the terms of payment shall be net monthly account due and payable on the last day of the month following the month in which the Goods were dispatched or would have been dispatched save for the postponement otherwise due to default on the part of the Company. The Company shall be entitled to submit its invoice with its delivery advice note at any time thereafter save that where the delivery has been postponed at the request of or by default of the Customer, then the Company may submit its invoice at any time after the goods are ready for delivery or would have been ready in the ordinary course but for the request or default as aforesaid.
- 6.2** Where Goods are delivered by instalments the Company may invoice each instalment separately and the Customer shall pay such invoices in accordance with these conditions.
- 6.3** No disputes arising under the Contract, nor delays beyond reasonable control of the Company, shall interfere with prompt payment in full by the Customer.
- 6.4** In the event of default in payment by the Customer, the Company shall be entitled without prejudice to any other right or remedy suspend all further deliveries on any Contract or Contracts between the Company and the Customer without notice and to charge interest on any amount outstanding at the rate of 4% per annum above the Base Rate of National Westminster PLC in force at the time when payment was due.
- 6.5** The Customer acknowledges and by submitting an Order consents to processing and disclosure by the Company of personal or financial data relating to the Customer relevant to any credit which may from time to time be afforded by the Company to credit reference agencies, banks and credit insurers and that such organisations may process the data provided or relevant to any other matter which the Company considers reasonable including, without limitation, any commercial relationship which the Company has with any third party.

Dimensions

- 7.1** The Company reserves the right to alter or change dimensions of the Goods supplied within reasonable limits having regard to the nature of the Goods. Dimensions specified by the Company are to be treated as approximate only unless the Customer specifically states in writing that exact measurements are required.
- 7.2** The Company reserves the right to make design changes to profiles and accessories in the Company literature for reasons including improvement of performance and other factors dictated by market forces.

Loss and Damages

- 8.1** In the event of any loss or damage or delay to any Goods delivered at our risk to a Customer or to his agent or otherwise to his order, notice of the same shall be given by the Customer forthwith upon delivery (or, in case of the loss of any Goods at the time the Goods should have been delivered) and the Customer shall at the same time take all necessary steps to notify the carrier in writing within 24 hours of such loss, damage or delay and where practicable shall enter a note of the same upon the carrier's receipt. If by reason of the failure by the Customer to give any notice as provided above we are precluded from making a recovery from the carrier in respect of the loss or damage or delay complained of, then we shall not be liable by the Customer in respect thereof and the Customer shall be liable to pay for the Goods as though no such loss or damage has occurred.
- 8.2** Terms and conditions proposed by a Customer cannot be accepted by our staff without express written sanction. It is a Customer's responsibility to ensure that such sanction has been given.

Confidential Information

- 9.1** All drawings, confidential records, computer software and other information supplied by the Company are supplied on the express understanding that copyright is reserved by the Company and the Customer will not, without written consent of the Company, either give away, loan, exhibit or sell any such drawings, documents, records, software or other information or extracts here from or copies thereof or use them in any connection with the Goods in respect of which they are issued.
- 9.2** Prior written permission must be sought before displaying the Company brands or logos on a Customer's website. No other brands or logos shall be used to market, display or sell the Company's products.

Customer's Drawings

- 10.1** The Customer shall be solely responsible for ensuring that drawings, information, advice and recommendations given to the Company either directly or indirectly by the Customer or by the Customer's agents, servants, consultants or advisers, are accurate, correct and suitable. Examination or consideration by the Company of such drawings, information, advice or recommendations shall in no way limit the Customer's responsibility hereunder unless the Company specifically agrees in writing to accept responsibility.
- 10.2** The Customer shall indemnify the Company from and against all actions, claims, costs and proceedings which arise due to manufacture of Goods to drawings or specifications of the Customer where such drawings or specification are at fault or where it is alleged that they involve an infringement of a Patent, Copyright, Registered Design or Design Copyright or other exclusive right.

Data and Technical Information

- 11.1** The information contained in the advertising, sale and technical literature issued by the Company may be relied upon as accurate in the exact circumstance in which it is express. Otherwise any illustrations, performance details, examples of installations and methods of assembly and all other technical data in such literature are based on experience and upon trials under test conditions and are provided for general guidance only.

Insolvency

- 12.1** The risk in all Goods supplied by the Company shall pass immediately to the Customer or his agent or otherwise to his order. The Company shall retain sole and absolute property in such Goods as beneficial owner until such time as the monies due to the Company from the Customer have been paid in full. Until that time, a Customer shall be in possession of the Goods as bailee only and shall be deemed to have so acknowledged.
- 12.2** The Customer's rights to possession of any Goods supplied by the Company shall cease if, being an individual, he commits an available act of bankruptcy or, being a company, a receiver becomes entitled to take possession of any of its assets, or any person become entitled to present a petition for its winding up, or it is resolved that it will be wound up. Under any circumstance where monies due to the Company are not forthcoming, the Company shall be entitled in these events to enter at any time with or without vehicles upon the premises at which it is believed such Goods to be stored and to repossess them.
- 12.3** A Customer shall be at liberty in the ordinary course of business, to process and make product from and as our agent, to sell the Company's Goods, whether paid for or not. The proceeds of any such sale shall be for our accounts and shall be held in trust for us to the extent of the full price of the Goods.

Force Majeure

- 13.1** Neither party shall be under any liability for any delay, loss or damage caused wholly or in part by act of God, governmental restriction, conditions or control, or by any reason of an act done or not done pursuant of a trade dispute involves its employees, or not by reason of any other act, matter or things beyond its reasonable control including failure by the other party to carry out provision for these conditions.

Legal

- 14.1** The Contract shall be governed and interpreted exclusively according to the Law of England and shall be subject to jurisdiction of the English Courts only.
