

BACKING SOLUTIONS

QUIET BACK

Our 6mm polyester backed comfortable backing solution creates a quiet and cushioned floor covering. Achieving sound reductions of up to 28dB, the solution contributes to a calm working and learning environment. Available for our sheet and tile offerings, supplied pre-bonded to your chosen product. Please contact one of our staff if you require more information.

IMPERVIOUS BACK

An antibacterial and impervious polypropylene carpet backing. This backing is an option on Patio, Eurocord and Felkirk. This provides a completely impervious seal to protect the sub-floor below. The solution is very effective in ensuring that any moisture can not transfer to the sub-floor, whether wood or concrete, preventing lingering moisture which can create smells and mould. With product and backing made solely out of polypropylene, here we have a 100% recyclable flooring solution.

STICKFAST

Our new polyester backing has been specially designed to bond perfectly to the hook profile of a hook and loop bonding strip, allowing for an immediate, weather proof and very quick uplift bonding solution.

This application is very popular in environments where floors will be lifted more than once a year. For example: regular uplift and replacement of heavily soiled areas (ie entrance wells); short term use carpet for events (exhibition floors); carpet protection or change of use areas; and raised access flooring projects where access is constantly required.
