About Sadolin

Sean Thompson,
Senior Technical Consultant

Sadolin – advanced technology underpinned by over 200 years of history...

Renowned throughout the professional and DIY markets for offering the very highest possible standard of wood protection, products bearing the Sadolin name benefit from the most recent advances in coatings technology ...yet at the same time boast a rich history and heritage stretching back over 200 years.

The Sadolin story is set in the harsh and unforgiving Scandinavian climate and the roots of this well respected brand can be traced back to 1777 when Swedish born Jacob Holmblad was granted royal permission to establish a textile dye works in Copenhagen. Nurtured by Jacob and handed down through the generations, this enterprise would eventually become a thriving paint and varnish business.

In 1912 Holmblad & Co merged with Sadolin's Farver company, founded just five years earlier by Gunnar Asgeir Sadolin. This young and experimental businessman was producing wax colours that were inspired by the fresh colours of Egyptian antiquities.

Heritage and innovation came together, and hundreds of years later these two driving forces continue to underpin the Sadolin brand as it is known today.

A white handwritten signature on a green background. The signature is stylized and appears to read 'Sean Thompson'.

Sadolin Classic Wood Protection

The most versatile woodstain

Scan me

Touch dry
4-6 hours

Coverage
Planned softwood up to 12m²/litre
Hardwood joinery up to 14m²/litre
Rough sawn timbers up to 8m²/litre

Recoat time
16-24 hours

Pack size
1lt, 2.5lt, 5lt and 20lt*
*dependent on colour

Suitable for: All exterior wood including decking

Sadolin Classic is a general purpose woodstain that can be used on its own on decking, fencing, cladding and garden furniture. It is also an ideal base coat on new joinery to be subsequently finished with Sadolin Extra.

Colour range see pages 37, 38, 39

*Recommended to use with
Sadolin Extra*

Sadolin Extra Durable Woodstain

Protects and enhances the beauty of wood

Scan me

Touch dry
4-6 hours

Coverage
Planned joinery up to 15m²/litre

Recoat time
16-24 hours

Pack size
500ml, 1lt, 2.5lt and 5lt

Suitable for: All exterior joinery

Sadolin Extra is a durable finishing coat for windows, doors and other exterior joinery. For optimum performance on new timber joinery use in conjunction with a base coat of Sadolin Classic. To retain and lift colour use a coat of Sadolin Extra Durable Clearcoat.

Colour range see pages 37, 38, 39

*Recommended to use with
Sadolin Classic*

Sadolin Ultra® Highly Translucent Woodstain

Up to 7 years protection

Scan me

Touch dry
4-6 hours

Coverage
up to 15m²/litre

Recoat time
16 hours

Pack size
1lt, 2.5lt and 5lt*
*dependent on colour

Suitable for: All exterior wood except decking

Sadolin Ultra is a highly translucent woodstain with advanced UV active technology that provides both the benefit of long lasting protection whilst enabling the timber and grain to still show through. Can be used on both new and redecoration projects.

Colour range see page 37

*Recommended to use with
Sadolin Ultra Basecoat
on new wood*

Sadolin Extra Durable Clearcoat

Clear waterproof protection

Scan me

Touch dry
4-6 hours

Coverage
up to 15m²/litre

Recoat time
16-24 hours

Pack size
1lt and 2.5lt

Suitable for: All exterior wood except decking

Sadolin Clearcoat is a clear, waterproof protective coating or maintenance coat that helps retain the existing colour of wood. It contains the minimum amount of golden yellow pigment possible to protect wood from UV damage and prevent greying.

*Recommended to use with
Sadolin Classic*

Sadolin Quick Dry Woodstain

6 years protection

Rainproof
under 30 Minutes
Touch dry
1 hour

Coverage
up to 13m²/litre

Recoat time
4-6 hours

Pack size
1lt and 2.5lt

Suitable for: All exterior wood except decking

Sadolin Quick Dry Woodstain is a convenient woodstain that is time efficient. It's 4-6 hour recoat time means that you can complete the job in one day. There is no sacrifice on durability with up to 6 years protection.

Colour range see pages 37, 38, 39

*Recommended to use with
Sadolin Quick Drying Wood
Preserver, if required*

Sadolin One Coat Woodstain

1 coat maintenance

Scan me

Touch dry
4-6 hours

Coverage
Planed up to 15m²/litre
Rough sawn up to 10m²/litre

Recoat time
16-24 hours

Pack size
1lt, 2.5lt and 5lt*
*dependent on colour

Suitable for: All exterior wood except teak, iroko and decking

Sadolin One Coat High Performance Woodstain is a convenient and time saving woodstain. A high performance product that provides a thick coating in just one application, allowing you to finish the job quickly without compromising protection or quality.

Colour range see pages 37, 38, 39

Recommended to use with Sadolin Wood Preserver, if required

Sadolin Non Drip Woodstain

Easy to apply

Touch dry
1-2 hours

Coverage
up to 18m²/litre

Recoat time
4-6 hours

Pack size
2.5lt

Suitable for: All exterior wood except decking

Sadolin Non Drip Woodstain is an easy to use product. The gelled structure of the woodstain ensures the product “grabs” onto the brush meaning no drips and therefore easier application.

Colour range see page 37

Recommended to use with Sadolin Quick Drying Wood Preserver, if required

Recoat time
24 hours

Pack size
500ml and 1lt

Suitable for: All wooden worktops

Sadolin Worktop Oil is a natural non-drying oil, providing excellent water repellency.

COLOURS AND CONSIDERATIONS

Considerations

Considering Colouration

Translucent woodstains will vary in appearance depending on the natural colour of the timber surface to which they are applied. For this reason, we recommend trial applications to ensure the acceptability of the final shade. The samples below represent the colour difference shown on softwoods and hardwoods when Antique Pine shade is applied.

Antique Pine - Softwood

Antique Pine - Hardwood

Considering Timber Condition

The condition of the timber may also influence your choice of coating. If the timber is unsightly, a translucent coating will not hide this, so an opaque finish would be preferable. If the timber is in good condition you may choose to highlight its natural beauty by applying a translucent coating.

Considering Product

There are both strengths and limitations when considering your choice between water or solvent based products. However, in order to avoid any potential problems we recommend that you are consistent through the whole system of application.

Considering Application Tools

Quality natural bristle brushes are best for solvent based systems, whereas we recommend synthetic brushes for water based.

Considering Application

Coating all exposed surfaces and those that are susceptible to unwanted moisture ingress will provide the best protection. Particularly vulnerable are end grains, for example on decking and garden architecture such as pergolas. Window sills should be rounded off to avoid sharp edges where it is difficult to achieve an adequate film build. Finally, ensure sufficient product is applied. Window rebates and glazing beads should be fully coated prior to fitting.

Considering When To Apply Woodstain

We recommend that all of our woodcare products are not applied, or allowed to dry, in temperatures below 8°C or above 25°C. It is also important to consider that relative humidity levels should be below 80% during drying times.

If you are unsure of anything with regards to Sadolin woodcare products either consult our technical datasheets or contact our Sadolin Advice Centre on 0330 024 0298.

***Disclaimer for all colours within this card**

We recommend a trial application before commencing. The final colour will depend on the original colour and condition of the timber and the number of coats applied. The colours shown are printed as accurately as the printing process will allow, however they may not match the applied product.

Due to the limitations of in-can tinting slight variations in shade may be noted from tin to tin. This is most noticeable in pastel shades. To avoid variations in shade on large areas the 'boxing' technique of mixing together the contents of a number of tins is recommended.

Sadolin Technology

BREATHABLE MICROPOROSITY

Some woodstains are waterproof - but they can also prevent natural moisture passing through the wood. This can make wood swell, breaking the bond between the coating and the wood.

Sadolin exterior products are designed to form a microporous 'jacket,' which is both waterproof and allows the wood to breathe naturally. The benefit is greater, longer lasting protection for your wood.

SUPERIOR COLOUR RETENTION

Exposure to sunlight and the weather causes conventional woodstains to fade over time.

Sadolin products use specially selected light-filtering pigments to promote longer-lasting colours.

EASY MAINTENANCE

The longer wood is exposed to the elements, the greater the risk of conventional woodstains blistering and peeling. Applying a new coat will require extensive sanding and preparation if wood is weathered.

Because Sadolin products are specially developed to weather naturally, applying a fresh coat requires only minimal preparation, reducing time, expense and labour.
