Pics have been involved with the specification, design and installation process of the Picspave imprinted and decorative concrete system for numerous Drive Thrus, Theme Parks and Commercial paving projects since 1992.

The Picspave system has been the paving product of choice by major international clients across the sector, and through a nationwide network of experienced Picspave installers, the process of successful installation is made simple.

Picspave combines colour, pattern and texture, with high wear resistance qualities and the durability essential for heavily trafficked paved areas. Picspave enables the rapid construction of all sizes of internal and external paved areas. Offering low maintenance. Picspave has many successful examples across the UK.

Whatever your requirements for Picspave, or your part in the construction process, contact our team of experienced industry professionals to discuss how we can help to cost, design or arrange a successful installation for you.

Picspave is available in a wide range of design and colour combinations and will suit any size of project including pedestrian, vehicular or general industrial.
