## Sensoric System Fittings

HEWI Sensoric System fittings offer maximum hygiene. No touching of the fitting is necessary for release. They are triggered by a hand movement and the water flow stops after a preset time interval.

## Lever handle model 115

One of the most common ways of transmitting bacteria and viruses to humans is the door handle. Thanks to its clever ergonomic design, the lever handle 115 can be easily operated with the elbow without touching the door handle with the hand. This reduces the risk of infection.

## Sensoric paper towel dispenser

The use of paper towel dispensers instead of hand air dryers leads to a significant reduction of bacteria and virus contamination in sanitary rooms. The hygienic removal of individual sheets of paper considerably reduces the risk of infection.
