

GEZE

GEZE SYSTEMS SOLUTIONS

Hygienic convenience and barrier-free access in entrance areas

ENTRANCE AREA AS SHOWPIECE

Individual solutions by GEZE fulfil the highest safety, convenience and design demands

Automatic revolving, swing and sliding doors offer customers, visitors and employees convenient barrier-free and non-contact entry to buildings. An automatic door solution from GEZE offers great advantages:

→ Hygienic and barrier-free solutions in entrance areas

Automatic door systems are the hygienic solution for being able to comfortably and barrier-free pass through entrances without contact, in public buildings, hotels and businesses, but especially in healthcare institutions such as clinics, care facilities and doctor's surgeries. With non-contact activation, doors can be opened without contact by hand, which prevents germs from being transmitted from one person to the other.

→ Modern and discreet design

For a representative entrance area, it is important that the design of the door technology harmonises with the building architecture. A good example is, Sweden's hyper-modern [Mall of Scandinavia shopping centre](#), where the door leaves are supplied with black painted frames which discreetly conceals GEZE drive units – a custom-specific adjustment which makes an impression.

→ Energy-efficient connections between inner and outer areas

Automatic doors help to save energy, since they open only when necessary, minimising the effects on the inside temperature of outside air. Our [GEZE ECdrive T2](#) automatic linear sliding door system with thermally separated profiles provides energy efficiency.

Proximity switches, such as the GC 307+, enable the activation of automatic inside and outside doors without touching

GEZE SOLUTIONS FULFILL COMPREHENSIVE DEMANDS IN ENTRANCES AREAS

The standards for doors in entrances areas are high – especially for public buildings, hospitals or shopping centres. The heavily frequented entrance areas at hospitals are used by children, by patients with walking aids, as well as by visitors with luggage. GEZE offers convenient, efficient and, above all, safe solutions for these areas. Sliding doors with the GEZE ECdrive promise uncompromising reliability. GEZE solutions help fulfil overarching demands such as accessibility, preventive fire protection and building security in healthcare. In addition, these applications demand a special focus on hygiene. Sensor push buttons ensure disinfected hands remain hygienic and clean – especially during operations. In addition, this helps to ensure that the door is already open before the doctor reaches it, particularly important time-critical situations.

→ GEZE Slimdrive SL-NT

Automatic linear sliding door system with low overall height and clear design line

→ GEZE Powerdrive PL

Automatic linear sliding door system for large and heavy doors of up to 200 kg leaf weight

→ GEZE ECdrive T2

Automatic linear sliding door system for doors with up to 140 kg leaf weight with thermally separated profiles. Can be connected with GEZE Cockpit

SUCCESS IN EVERY AREA

References from the Nordic Region

Nordfløjen Rigshospitalet, Denmark

Healing architecture, high hygiene, and extreme functionality are all supplied by the door automatics from GEZE.

Mall of Scandinavia, Sweden

GEZE automatic door solutions reflect sober elegance, smooth accessibility and a focus on sustainability.

The Norlands Hospital, Norway

With an extensive range of solutions, GEZE's door automatics provides barrier-free entrances in locations where people are extra vulnerable.

The Åhlensbuilding, Uppsala Sweden

Automatic sliding doors in entrance doors at shopping facilities provides safe and easy access for customers.

The Carlanderska Private Hospital, Sweden

GEZE high quality automatic door systems ensures safety and lasting durability for daily use.

The Marriott Hotel Copenhagen, Denmark

Automatic doors ensure controlled opening and provides a safe and welcoming entrance.

OVERVIEW

Products

Slimdrive SL NT

Automatic linear sliding door system with low overall height and clear design line

ID.nr: 132473

GC 307+

Non-contact proximity switch for activating automatic doors

ID.nr: 193226

Powerdrive PL

Automatic linear sliding door system for large and heavy doors of up to 200 kg leaf weight

ID.nr: 117027

ES 80

Contactless elbow switch for automatic door system

ID.nr: 180259

ECdrive T2

Automatic sliding door system for doors with up to 140 kg leaf weight with thermally separated profiles

ID.nr: 179246

GC 363 R

Combined detector for activating and safeguarding of automatic sliding doors

ID.nr: 160283

GC 342 Safety sensor

Laser scanner for the protection of automatic swing doors with integrated object and wall blanking.

ID.nr: 167438

GC 304 R

Radar movement detector with individual adjustment option for activating automatic doors

ID.nr: 130651

Plastic elbow switch

Elbow switch for activation of automatic doors, IP rating IP30

ID.nr: 167438

ES 20

Stainless steel elbow contact

ID.nr: 084959

GC 334 Sensorliste

Electronically adjustable active infrared sensor with dipswitch for safeguarding of automatic swing and revolving doors

GC 338 Sensorliste

Electronically adjustable active infrared sensor with dipswitch for safeguarding of automatic swing and revolving doors

MAINTENANCE

- For the automatic door to keep its optimal functionality and assure safety on the door, it is recommended to maintain the drives with regular after sales services.
- A regular service on the door not only secures the safety and usability, it prolongs the lifetime of the door drive and optimizes the daily comfortable use.
- Our local team and our service technicians are specialists in making sure your automatic door is maintained to the highest standards.
